Mr. Bryan Ailey People Inc. 1173 West Main Street Abingdon, Virginia 24210

Re: Sweetbriar II

Dear Mr. Bryan Ailey:

The subject property, known as Sweetbriar II, is a proposed affordable multifamily development to be located at 19274 Elementary Drive in Abingdon, Washington County, Virginia. The subject property consists of 22 revenue-producing units to be constructed with an allocation of tax credits. The subject property is an open age community.

The subject property is proposed to consist of 22 revenue-producing units including 3-bedroom duplex units. A total of 22 units are proposed to be income restricted to 60% of AMI; no units are proposed to be set aside as market rate units; no units are proposed to benefit from project-based rental assistance; no units are proposed to benefit from HOME financing. The rent and income restrictions associated with the proposed allocation of tax credits will run for the next 30 years.

The scope of this assignment consists of a comprehensive market analysis for the subject property. The market study was completed in accordance with VHDA, National Council for Housing Market Analyst (NCHMA) guidelines and the Uniform Standards of Professional Practice (USPAP). The completion of this report involved a site visit, interviews with local property managers, and the collection of market data through discussions with persons knowledgeable of the local real estate market.

The purpose, intended use, and function of the report is to assess the marketability of the subject property for tax credit application purposes. This report should not be used for any other purposes without the express written permission of Allen & Associates Consulting.

The report has been generated for the benefit of our client People Inc. VHDA is named as an additional user of the report. No other person or entity may use the report for any reason whatsoever without our express written permission.

A summary of our findings and conclusions is found in the following pages. The conclusions reported are based on the conditions that exist as of the effective date of this report. These factors are subject to change and may alter, or otherwise affect the findings and conclusions presented in this report.

To the best of our knowledge, this report presents an accurate evaluation of market conditions for the subject property as of the effective date of this report. While the analysis that follows is based upon information obtained from sources believed to be reliable, no guarantee is made of its accuracy.

Feel free to contact us with any questions or comments.

Respectfully submitted: ALLEN & ASSOCIATES CONSULTING

Jeff Carroll

EXECUTIVE SUMMARY

The following is a summary of our key findings and conclusions with respect to the subject property:

Project Description

The subject property, known as Sweetbriar II, is a proposed affordable multifamily development to be located at 19274 Elementary Drive in Abingdon, Washington County, Virginia. The subject property consists of 22 revenue-producing units to be constructed with an allocation of tax credits. The subject property is an open age community.

Proposed Unit Mix

The subject property is proposed to consist of 22 revenue-producing units including 3-bedroom duplex units. A total of 22 units are proposed to be income restricted to 60% of AMI; no units are proposed to be set aside as market rate units; no units are proposed to benefit from project-based rental assistance; no units are proposed to benefit from HOME financing. The rent and income restrictions associated with the proposed allocation of tax credits will run for the next 30 years.

	Proposed Unit Configuration									
Unit Type / Income Limit / Rent Limit	HOME	Subsidized	Units	Gross Rent	UA	Net Rent				
3BR-2BA-1103sf / 60% of AMI / 40% of AMI	no	No	3	\$615	\$226	\$389				
3BR-2BA-1103sf / 60% of AMI / 50% of AMI	no	No	3	\$726	\$226	\$500				
3BR-2BA-961sf / 60% of AMI / 50% of AMI	no	No	5	\$726	\$226	\$500				
3BR-2BA-961sf / 60% of AMI / 60% of AMI	no	No	3	\$726	\$226	\$500				
3BR-2BA-1090sf / 60% of AMI / 60% of AMI	no	No	8	\$726	\$226	\$500				
Total/Average			22	\$711	\$226	\$485				

Site Description

The subject property includes an irregular-shaped parcel consisting of approximately 5.15 acres and approximately 100 feet of road frontage.

A total of 49 parking spaces are planned for this development (38 regular / 11 accessible / 2.23 spaces per unit). Privately-owned parking areas are planned for the subject property. We normally see 1.5 to 2.0 spaces per unit for projects like the subject. Public transportation is not found in the area. In our opinion, the current parking appears adequate for the subject property.

Additional Considerations:

Zoning	R-1, Residential Limited. Legal, conforming use.
Environmental	New construction. No suspected environmental conditions.
Topography	No issues detected.
Flood	Zone X. Outside the 100-year flood zone.
DDA Status	Washington County, Virginia. Not designated as a Difficult to Develop Area.
QCT Status	Tract 104.02. Not designated as a Qualified Census Tract.
Access	Fair to Good. Located off a moderately-traveled road.
Visibility	Fair to Good. Located off a moderately-traveled road.

In our opinion, the site is suitable for development.

Neighborhood Description

In our opinion, the subject property has a very good location relative to competing properties with respect to neighborhood characteristics.

In our opinion, the subject property has a good location relative to competing properties with respect to area amenities.

Additional Considerations:

Executive Summary

Crime Schools Average Commute

Lower crime rates than market average. Higher graduation rates than market average. Similar to market average.

In our opinion, the neighborhood is suitable for development.

Primary Market Area

We defined the primary market area by generating a 25-minute drive time zone around the subject property. We also considered existing concentrations of multifamily properties and the nearest census tract boundaries in our analysis.

The primary market area includes a population of 63,477 persons and covers a total of 374.6 square miles, making it 21.8 miles across on average.

We estimate that up to 20 percent of demand will come from areas outside of the primary market area.

Demogaphic Characteristics

We anticipate moderate population and household growth for the market area. Renter households are anticipated to increase modestly as well. Finally, we anticipate that rents will grow with CPI over the next few years. Additional details follow:

Population	Market area population currently stands at 63,477 and is projected to grow 0.4 percent this year.
Households	Market area households currently stand at 26,122 and is projected to decline 0.2 percent this year.
Renter Households	Market area renter households currently stand at 7,710 and is projected to decline 0.1 percent this year.
Renter Tenure Rent Growth	Market area renter tenure currently stands at 29.5 percent. Market area rents have grown 2.51% annually since 2010.

Regional Economic Outlook

We anticipate moderate economic growth for the region. Additional details follow:

Est Employment	Regional establishment employment currently stands at 52,526 and is projected to grow 1.4 percent this year.
Civ Employment	Regional civilian employment currently stands at 45,479 and is projected to decline 0.9 percent this year.
Empl by Industry	Regional establishment employment currently stands at 53,088. The data suggests that Retail Trade is the largest employment category accounting for 13.6% of total regional employment. State and Local Government is the second largest category accounting for 12.2% of total employment. Manufacturing is the third largest category accounting for 11.0% of total employment. Health Care and Social Assistance is the fourth largest category accounting for 10.4% of total employment. Accommodation and Food Services is the fifth largest category accounting for 8.4% of total employment.
Top Employers	The top employers include: (1) K-VA-T Food Stores (1001 employees); (2) Johnston Memorial Hospital (687 employees) and; (3) Walmart Supercenter (550 employees).
Layoffs/Expansions	Major employers are currently hiring; none reported any pending layoffs.

Supply Analysis

Our analysis includes a total of 41 confirmed market area properties consisting of 1,595 units. The occupancy rate for these units currently stands at 94 percent. This rate reflects the occupancy for all confirmed market area units, regardless of project status (stabilized, under construction, proposed, etc.).

The following tables summarize our findings for this market area:

	Grand	Total		
Project Type	Properties	Units	Vacant	Occupancy
Market Rate	25	840	45	95%
Restricted	12	378	41	89%
Subsidized	4	377	3	99%

Most Comparable Properties

An overview of the market rate comparables selected for purposes of our analysis follows. The properties we consider to be the best comparables are highlighted for the reader's reference.

Key	Property	Units	Occupancy	Built	Renovated	Rents	Туре	Miles to Sub
017	Downtown Plaza Apartments	76	92%	1968	na	Market Rate	Family	11.97
023	Glade Terrace Apartments 1	12	92%	2012	na	Market Rate	Family	14.00
024	Glade Terrace Apartments 2	4	100%	2013	na	Market Rate	Family	14.00
027	Hallock Drive Townhomes	38	100%	2003	na	Market Rate	Family	1.70
041	Mountain Empire Apartments	48	100%	1990	na	Market Rate	Family	5.43
045	Pinehedge Condominiums	30	100%	1985	2009	Market Rate	Family	2.37

046	Promise Landing Apartments	86	99%	1990	na	Market Rate	Family	6.30
076	Willow Run Apartments	192	95%	2009	na	Market Rate	Family	5.24
080	Wyndale Court Condominium	16	100%	2003	na	Market Rate	Family	0.69

An overview of the restricted rent comparables selected for purposes of our analysis follows. The properties we consider to be the best comparables are highlighted for the reader's reference.

Key	Property	Units	Occupancy	Built	Renovated	Rents	Туре	Miles to Sub
028	Harbor Landing Apartments	32	97%	2004	na	Restricted	Family	10.59
049	Ridgecrest Town Apartments	72	79%	2008	na	Restricted	Family	8.21
054	Sapling Grove Apartments	26	100%	2008	na	Restricted	Family	11.00
061	Sweetbriar 1	20	95%	2009	na	Restricted	Family	0.00
074	Whites Mill Point Apartments	32	97%	2006	na	Restricted	Family	2.75

Achievable Rents

In the following table we present our concluded achievable rents and rent advantage for the subject property:

Achievable Rents									
Unit Type / Income Limit / Rent Limit	HOME	Subsidized	Units	Achievable	Proposed	Advantage			
3BR-2BA-1103sf / 60% of AMI / 40% of AMI	no	No	3	\$404	\$389	3.7%			
3BR-2BA-1103sf / 60% of AMI / 50% of AMI	no	No	3	\$500	\$500	0.0%			
3BR-2BA-961sf / 60% of AMI / 50% of AMI	no	No	5	\$500	\$500	0.0%			
3BR-2BA-961sf / 60% of AMI / 60% of AMI	no	No	3	\$500	\$500	0.0%			
3BR-2BA-1090sf / 60% of AMI / 60% of AMI	no	No	8	\$500	\$500	0.0%			
Total / Average			22	\$487	\$485	0.4%			

Our analysis suggests an average achievable rent of \$487 for the subject property. This is compared with an average proposed rent of \$485, yielding an achievable rent advantage of 0.4 percent. Overall, the subject property appears to be priced at or below achievable rents for the area.

NCHMA Demand Analysis

In the following tables we present our concluded demand, capture rate, penetration rate and absorption period estimates for the subject property using the NCHMA demand methodology:

Unit Type / Rent Type / Income Limit	Vac Units at Market Entry	Gross Demand	Vacant & Pipeline Units	Capture Rate Gross	Capture Rate Net	Penetration Rate	Absorption Pd (Mos)
3-Bedroom / Restricted / 60% of AMI	22	518	13	4.2%	4.4%	14.7%	3
	Project-Wide Gross Capture Rate			4.2%			
	Project-Wide Ne	et Capture Ra	ate	4.4%			
	Project-Wide Pe	enetration Ra	ite	14.7%			
	Stabilized Occupancy			95%			
	Project-Wide At	osorption Per	riod	3 mos			

In our opinion, the estimated project-level capture rate suggests an appropriate number of units for the subject property. The unit level capture rates suggest an appropriate mix of units for the subject property.

In our opinion, the estimated project-level penetration rate suggest an appropriate number of units for the subject property. The unit-level penetration rates suggest an appropriate mix of units for the subject property.

Our analysis suggests that the subject property will stabilize at 95 percent occupancy. We estimate 3 months of absorption and an average absorption rate of 6.3 units per month for this project. In our opinion, the absorption period suggests an appropriate number and mix of units for the subject property.

It is important to note that this analysis does not account for pent-up demand, pre-leasing efforts or rent concessions. In our opinion, an effective pre-leasing effort could result in a month-for-month reduction in the estimated absorption period

for this project. In addition, any concessions or rent subsidies not accounted for already in this analysis could cut capture rates and absorption periods significantly.

VHDA Demand Analysis

In the following table we present our concluded capture rate and absorption period estimates for the subject property using the VHDA demand methodology:

Project-Wide Capture Rate - LIHTC Units	16.3%
Project-Wide Capture Rate - Market Units	0.0%
Project-Wide Capture Rate - All Units	16.3%
Project-Wide Absorption Period (Months)	3 mos

Conclusion

In conclusion, the subject property appears to be feasible from a market standpoint. The units appear to be priced appropriately and we anticipate a rapid lease-up after construction.

Because of the demonstrated depth of demand in this area, we do not believe the construction of this property will have an adverse impact on existing projects in the market area.

PROJECT OVERVIEW

Project Description

The subject property, known as Sweetbriar II, is a proposed affordable multifamily development to be located at 19274 Elementary Drive in Abingdon, Washington County, Virginia. The subject property consists of 22 revenue-producing units to be constructed with an allocation of tax credits. The subject property is an open age community.

Select project details are summarized below:

	Project Description
Property Name	Sweetbriar II
Street Number	19274
Street Name	Elementary
Street Type	Drive
City	Abingdon
County	Washington County
State	Virginia
Zip	24210
Units	22
Year Built	2020
Project Rent	Restricted
Project Type	Family
Project Status	Prop Const
Financing Type	Tax Credit

Construction and Lease-Up Schedule

We anticipate a 12-month construction period for this project. Assuming a December 1, 2020 closing, this yields a date of completion of December 1, 2021. Our demand analysis (found later in this report) suggests a 3-month absorption period. This yields a date of stabilization of March 1, 2022.

Unit Configuration

The subject property is proposed to consist of 22 revenue-producing units including 3-bedroom duplex units. A total of 22 units are proposed to be income restricted to 60% of AMI; no units are proposed to be set aside as market rate units; no units are proposed to benefit from project-based rental assistance; no units are proposed to benefit from HOME financing. The rent and income restrictions associated with the proposed allocation of tax credits will run for the next 30 years.

Building Plans

Unit Plans (Continued)

IMPROVEMENT DESCRIPTION & ANALYSIS

Our improvement analysis includes an evaluation of the following factors with respect to the subject property: (1) Building Features; (2) Unit Features; (3) Project Amenities, (4) Utility Configuration; and (5) Useful Life Analysis.

Building Features

The subject property is proposed to consist of 22 revenue-producing units in 11 residential buildings and 0 nonresidential buildings. The development is proposed to include approximately 23,026 square feet of net rentable area and 25,252 square feet of gross building area.

Additional information regarding the subject property's proposed major building systems is found below.

Foundation - Concrete Slab, Basements, Crawl Spaces, etc. The subject property is proposed to include slab on grade foundations.

Structural Frame - Floor, Wall, Roof Structural Systems, etc.

The subject property is proposed to be constructed with wood frame surfaced with plywood. Floor/ceiling assemblies are proposed to consist of wood joists & plywood or concrete subfloors. Roof assmeblies are proposed to consist of wood trusses & plywood sheathing.

Exterior Wall - Exterior Finishes, Doors, Windows, Exterior Stairs, etc.

The subject is proposed to include fiber cement siding & brick veneer, double hung vinyl double pane windows, steel clad insulated six-panel unit entry doors, and steel clad insulated six-panel patio doors.

<u>Roof - Sheathing, Coverings, Warranties, Gutters & Downspouts, Soffit & Fascia, etc.</u> The subject is proposed to include gabled asphalt shingle roofs.

Vertical Transportation - Elevator, Interior Stair Systems

The subject property is not proposed to include elevators.

Plumbing - Sanitary, Storm, Sewer, Fixtures, Domestic Hot Water

Domestic water piping is proposed to be constructed of CPVC pipe and fittings. Wastewater lines consist of PVC pipe and fittings. Potable hot water is proposed to be supplied via individual electric hot water heaters.

HVAC - Heating, Air Conditioning, Ventilation

The subject property is proposed to include individual interior-mounted electric heat, individual exterior-mounted a/c compressors with interior-mounted air handlers.

Electrical and Communications - Distribution, Aluminum Wiring, etc.

Buildings are proposed to receive electrical power from exterior pad-mounted transformers. Electrical service to units is proposed to consist of 120/240V AC with 100 amps available for each panel. Electrical wiring is proposed to consist of copper. Properly grounded, three-prong outlets are proposed in each dwelling unit. The outlets located in the wet areas are proposed to be Ground Fault Circuit Interrupter (GFCI) outlets. Surface-mounted flourescent & LED fixtures are proposed.

Fire Suppression

The subject property is not proposed to be equipped with an NFPA-13 fully automatic fire suppression (sprinkler) system. In addition, hard-wired smoke detectors with battery backup are proposed in each bedroom area.

Unit Features

The subject property is proposed to contain 22 revenue-producing units including 17 regular units and 5 accessible units, including 66 bedrooms, 44 full bathrooms and 0 half bathrooms.

Additional information regarding the subject property's proposed unit features is found below.

Walls / Ceilings / Interior Doors

Subject property units are proposed to include 8 foot ceilings, painted gypsum wallboard & ceilings, wood solid-core flat panel interior doors, and wood solid-core flat panel closet doors.

Floor Covering

Floor covering is proposed to consist of luxury vinyl plank in the entryways, bathrooms, living areas and bedrooms, along with ceramic tile in the bathrooms and kitchens.

Kitchens

Kitchens are proposed to include electric four-top ranges, range hoods, frost-free refrigerators, dishwashers, composite wood cabinets, laminated countertops and stainless steel sinks.

Bathrooms

Bathrooms are proposed to include composite wood vanities, cultured marble countertops, porcelain sinks & toilets, along with fiberglass tubs & surrounds.

Project Amenities

A discussion of the development's proposed project amenities is found below.

Site & Common Area Amenities

No project amenities are proposed for the subject property.

Parking

Open parking is proposed for the subject property.

Laundry

Washer/dryer units are proposed for the subject property.

Security

Call buttons are proposed for some units at the subject property.

Services

No special services are proposed for the subject property.

Tables comparing the subject property's proposed amenities to that of the most comparable properties are found at the end of this section.

Utility Configuration

The subject property is proposed to include electric heat, electric cooking and electric hot water. All utilities - with the exception of trash - are proposed to be paid by the resident.

In the table that follows we compare the subject's proposed utility allowances (also known as tenant paid utilities) to the estimated allowances using the HUD Utility Schedule Model:

				Utility Al	lowances					
BR	BA	SF	Unit Type	Inc Lmt	Rnt Lmt	HOME	Subs	Units	UA	HUD UA
3	2.0	1,103	Duplex	60% of AMI	40% of AMI	no	No	3	\$226	\$226
3	2.0	1,103	Duplex	60% of AMI	50% of AMI	no	No	3	\$226	\$226
3	2.0	961	Duplex	60% of AMI	50% of AMI	no	No	5	\$226	\$226
3	2.0	961	Duplex	60% of AMI	60% of AMI	no	No	3	\$226	\$226
3	2.0	1,090	Duplex	60% of AMI	60% of AMI	no	No	8	\$226	\$226
Total/Ave	rage							22	\$226	\$226

Total/Average

The HUD utility allowances are a good measure of the energy costs for a given property. Our analysis suggests that the proposed utility allowances are equivalent to those established using the HUD model.

Tables comparing the subject property's utility configuration to that of the most comparable properties are found at the end of this section. Outputs from the HUD Utility Schedule Model are also found there.

Useful Life Analysis

We anticipate a useful/economic life of 50 years for this development, assuming that appropriate replacement reserves are established for this property.

In the course of completing this study, we rated the condition of the subject property and the most comparable properties on a 1-5 scale (1 being the worst and 5 being the best). We also evaluated the actual and effective ages of the subject and select comparables. A table summarizing our findings is found below:

	Actual Age	Effective Age C	Condition

SITE DESCRIPTION & ANALYSIS

Our assessment of the site included an evaluation of the following factors with respect to the subject property: (1) Survey; (2) Site Plan; (3) Nuisances, Hazards, Detrimental Influences & Environmental; (4) Topography; (5) Flood Zone; (6) Difficult to Develop Area Status; (7) Qualified Census Tract Status; and (8) Traffic Patterns, Access & Visibility.

Survey

A survey for the subject property was provided to the analyst for review. Current surveys should be evaluated to ascertain whether there are any easements encumbering the subject property. Our review/inspection suggested that the site is currently encumbered by standard utility easements that do not adversely affect its marketability and that the site is serviced by municipal utilities.

Site Plan

A site plan for the subject property was provided to the analyst for review. Site plans are necessary to analyze the site improvements, parking configuration, internal traffic flow, location of building improvements and landscaping improvements for the subject property. Our review did not identify any problem areas with respect to the subject property. A summary of the development's site features is found below.

Acres / Lot Shape / Frontage

The subject property includes an irregular-shaped parcel consisting of approximately 5.15 acres and approximately 100 feet of road frontage.

Zoning

According to the sponsor, the subject property is currently zoned R-1, Residential Limited. It is our understanding that the current zoning for the subject is a legal, conforming use.

Parking / Streets / Curbs / Sidewalks

A total of 49 parking spaces are planned for this development (38 regular / 11 accessible / 2.23 spaces per unit). Privately-owned parking areas are planned for the subject property. We normally see 1.5 to 2.0 spaces per unit for projects like the subject. Public transportation is not found in the area. In our opinion, the current parking appears adequate for the subject property.

Dumpsters / Dumpster Enclosures

The subject includes 22 roll out bins.

Landscaping / Perimeter Fence / Retaining Walls / Entry Sign

Trees, shrubs & lawns are found at the subject property. A perimeter fence is not found at the subject property. Retaining walls are not found at this property. One unlighted entry sign is found at this property.

Stormwater Management / Site Lighting / Water Service / Wastewater Service

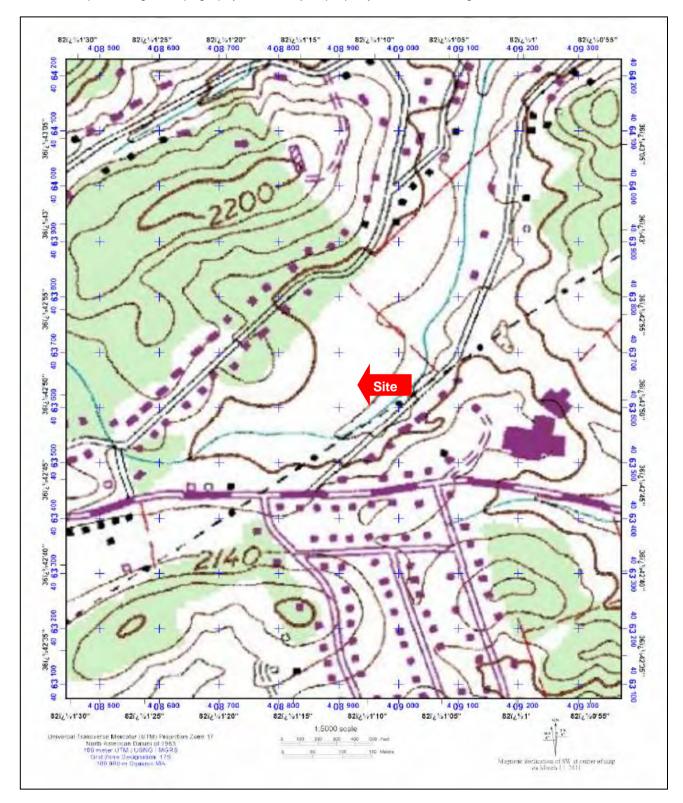

Stormwater management consists of catch basins and concrete pipe connecting to a public system. Site lighting consists of publicly-owned HID poles. Domestic water service to buildings consists of ductile iron pipe connecting to a public system. Wastewater service to buildings consists of PVC pipe connecting to a public system.

Nuisances, Hazards, Detrimental Influences & Environmental

We did not observe any nuisances, hazards, detrimental influences or recognized environmental conditions on our inspection of the subject property. Nevertheless, we recommend that the sponsor obtain a comprehensive environmental assessment from a qualified professional.

Topography

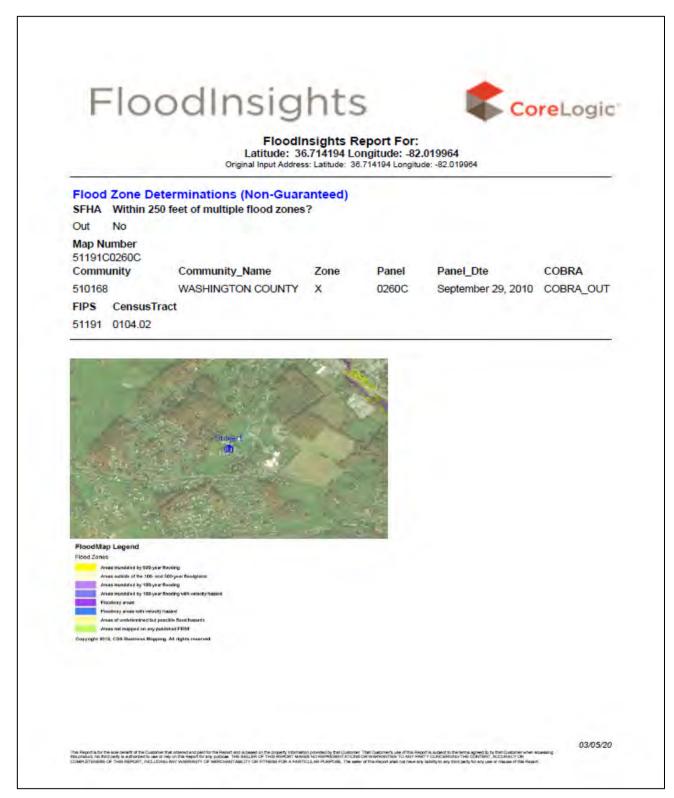

The USGS map showing the topography of the subject property and surrounding area is found below:

The topographic map shows that the site is flat and drains to adjacent properties to the south and east. In our opinion, there do not appear to be any topographic issues with respect to the subject property.

Flood Zone

The map showing the location of the subject property relative to nearby areas prone to flooding (identified in purple) is found below:

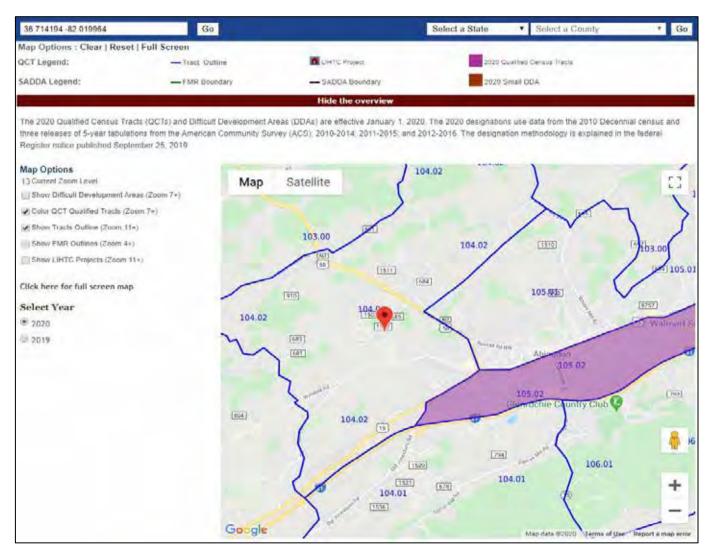

According to FEMA map number 51191C0260C dated September 29, 2010, the subject property is located in Zone X. This is an area that is identified as being located outside the 100-year flood zone.

Difficult to Develop Area Status

The subject proprterty is located in Washington County, Virginia - an area that is not designated as a Difficult to Develop Area. Consequently, the subject property does not appear to qualify for special DDA funding under state and federal programs.

Qualified Census Tract Status

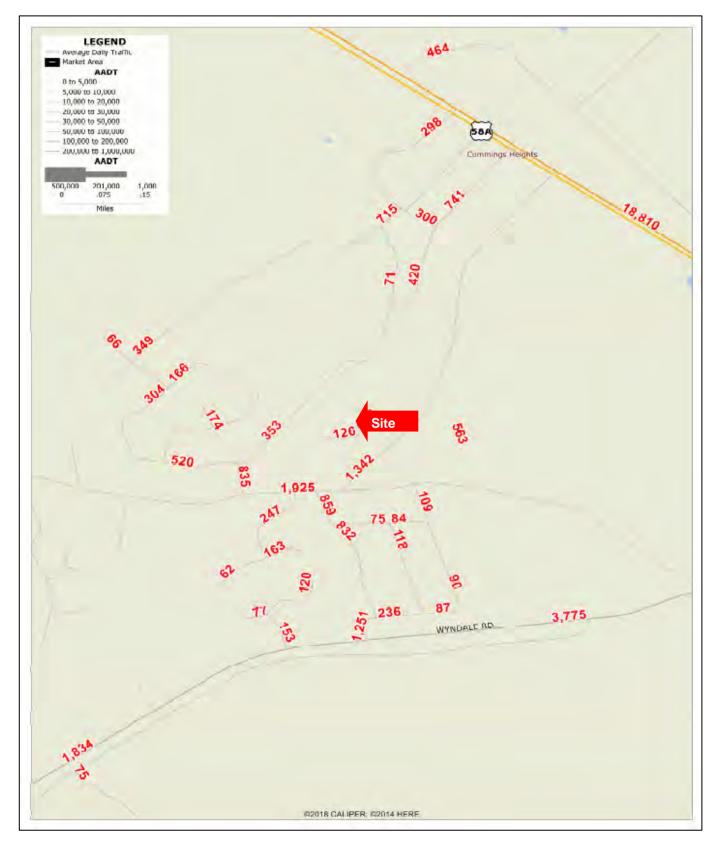

The federal government has identified census tracts throughout the United States that include high concentrations of low-income households and substandard housing units. These areas, known as Qualified Census Tracts, qualify for special funding under various state and federal programs. A QCT map showing the location of the subject property is found below:

The subject property is located in Census Tract 104.02 - an area that is not designated as a Qualified Census Tract. Consequently, the subject property does not appear to qualify for special QCT funding under state and federal programs.

Traffic Patterns, Access & Visibility

A traffic map identifying the subject property is found below:

Access

The subject property is located on Elementary Drive, approximately 0.5 miles south of US 58A in Abingdon, Virginia. Elementary Drive is a moderately-traveled north-south road carrying approximately 1,500 vehicles per day. We did not observe any road or infrastructure improvements taking place in the immediate vicinity of the subject property. In our opinion, therefore, accessibility is fair to good by virtue of the location of the subject property relative to existing streets and thoroughfares.

Visibility

The subject property is visible from Elementary Drive with limited frontage and a moderate volume of drive-by traffic. Consequently, in our opinion visibility is fair to good by virtue of the exposure of the subject property to existing driveby traffic volumes.

In the course of completing this study, we rated the access and visibility for the subject property and the most comparable properties on a 1-5 scale (1 being the worst and 5 being the best). A table summarizing our findings is found below:

Access & Visibility											
	Rating

NEIGHBORHOOD DESCRIPTION & ANALYSIS

Neighborhood

Our assessment of the neighborhood includes an evaluation of the following factors with respect to the subject property: (1) Life Cycle; (2) Surrounding Properties; (3) Economic Characteristics; (4) Crime Rates; (5) Educational Attainment; and (6) Commuting Patterns.

Life Cycle

Neighborhoods are sometimes thought to evolve through four distinct stages:

- Growth A period during which the area gains public favor and acceptance.
- Stability A period of equilibrium without marked gains or loses.
- Decline A period of diminishing demand.
- Revitalization A period of renewal, redevelopment, modernization, and increasing demand.

Based on our evaluation of the neighborhood, the subject property is located in an area that appears to be in the stability stage of its life cycle. Modest population growth is anticipated for the next several years.

Surrounding Properties

The subject property is located in Abingdon, Virginia. The immediate area consists of residential land uses.

Single family in good condition is located to the north, south, east, and west of the subject property. Neighboring land uses appear to be complimentary to the use of the subject property. The condition of the neighboring properties appears to be complimentary as well.

Surrounding Properties							
Direction	Use	Condition					
North	Single Family	Good					
South	Single Family	Good					
East	Single Family	Good					
West	Single Family	Good					

Surrounding property uses are summarized in the table found below:

Source: Allen & Associates

Economic Characteristics

The subject property is located in an area with average household incomes of \$50,643 (in 2015 dollars); this is compared with \$37,025 for the most comparable properties included in this analysis.

In addition, the subject property is located in an area with median cash rents of \$606 (in 2015 dollars); this is compared with \$608 for the most comparable properties included in this analysis.

Finally, the subject property is located in an area with median single family home values of \$150,400 (in 2015 dollars); this is compared with \$139,960 for the most comparable properties included in this analysis.

Crime Rates

The subject property is located in an area with personal crime rates of 3.8%. Personal crime includes offenses such as rape, murder, robbery and assault. Our research suggests that the average personal crime rate for the most comparable properties stands at 4.0%.

In addition, the subject property is located in an area with property crime rates of 2.6%. Property crimes include offenses such as burglary, larceny and theft. Our research suggests that the average property crime rate for the most comparable properties stands at 4.4%.

Please note: The crime statistics included in this analysis are historical area-wide figures. These statistics make no consideration for changing demographics or the implementation of an affirmative crime prevention program at the subject property.

Educational Attainment

The subject property is located in an area with high school graduation rates of 85.3%; this is compared with 80.7% for the most comparable properties included in this analysis.

In addition, the subject property is located in an area with college graduation rates of 25.6%; this is compared with 22.7% for the most comparable properties included in this analysis.

Commuting Patterns

The subject property is located in an area with an average drive to work of 20.7 minutes; this is compared with 20.7 minutes for the most comparable properties included in this analysis.

In addition, the subject property is located in an area with an average of 1.70 vehicles per household; this is compared with 1.53 vehicles per household for the most comparable properties included in this analysis.

Conclusion

In our opinion, the subject property has a very good location relative to competing properties with respect to neighborhood characteristics.

Proximity to Area Amenities

Our assessment included an evaluation of the proximity of various amenities to the subject and the most comparable properties. We looked at the following amenities in our analysis: (1) Banks; (2) Grocery; (3) Emergency Clinics; (4) Pharmacies; and (5) Discount Stores.

A listing of some of the area amenities is found below. An amenity map is found in the following pages:

Amenity	Name	Miles				
Bank	BB&T	1.3 mi SE				
Grocery	Food Country USA	0.6 mi N				
Emergency Clinic	MedWorks	1.5 mi SE				
Pharmacy	Northgate Pharmacy	1.5 mi SE				
Discount Store	Mark It Down	0.6 mi NE				
Elementary School	E B Stanley Elementary School	3.7 mi NE				
Middle School	Wallace Middle School	7.5 mi				
High School	William King High School	1.8 mi SE				
Bus Stop	-	-				

Source: Google Maps

BB&T, Food Country USA, Northgate Pharmacy, and Mark It Down discount store are all located less than 1.5 miles away from the subject property. MedWorks is located 1.5 miles away.

Number of Area Amenities

We utilized Microsoft Streets & Trips to evaluate the subject and the most comparable properties with respect to the number of amenities in the immediate area.

- Microsoft Streets & Trips identified 6 banks within 2.0 miles of the subject property. The subject is ranked 9 out of the 15 properties included in this analysis.
- A total of 5 grocery stores are in the vicinity of the subject property. The subject is ranked 11 for the area.
- A total of 0 hospital are in the vicinity of the subject property. The subject is ranked 5 for the area.
- A total of 4 pharmacies are in the vicinity of the subject property. The subject is ranked 8 for the area.
- A total of 14 shopping centers are in the vicinity of the subject property. The subject is ranked 9 for the area.

Nearest Area Amenities

We utilized Microsoft Streets & Trips to evaluate the subject and the most comparable properties with respect to the nearest area amenities.

- According to Microsoft Streets & Trips, the nearest bank is 1.21 miles away from the subject property. The subject is ranked 13 out of the 15 properties included in this analysis.
- The nearest grocery store is 0.61 miles away from the subject property. The subject is ranked 8 for the area.
- The nearest hospital is 2.57 miles away from the subject property. The subject is ranked 6 for the area.
- The nearest pharmacy is 1.19 miles away from the subject property. The subject is ranked 8 for the area.
- The nearest shopping center is 0.6 miles away from the subject property. The subject is ranked 8 for the area.

Conclusion

In our opinion, the subject property has a good location relative to competing properties with respect to area amenities.

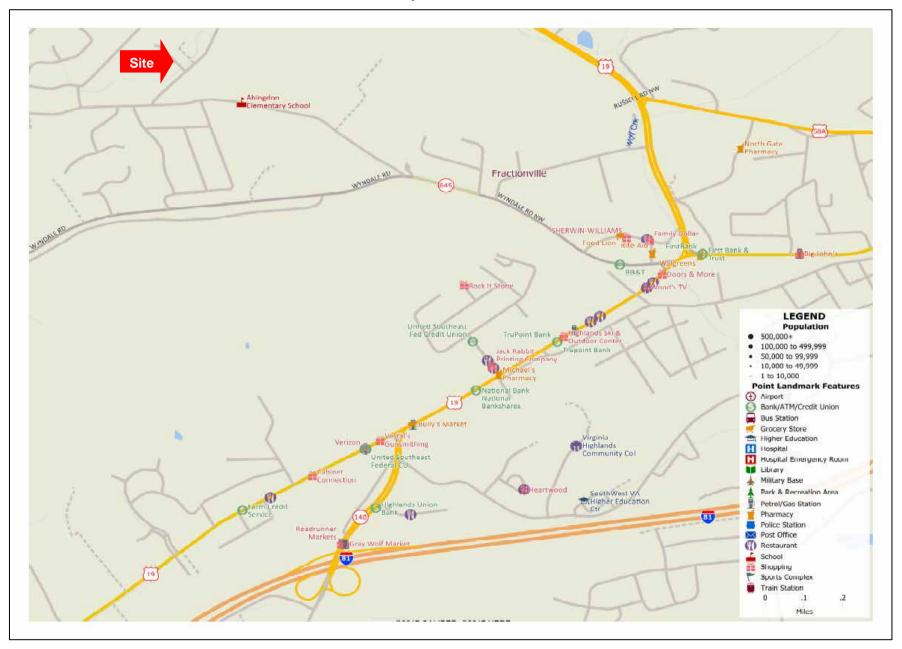

Tables comparing the subject property's proximity to area amenities to that of the most comparable properties is found on the next page. Maps showing the proximity of the subject property to area amenities and area employers is also found in the following pages.

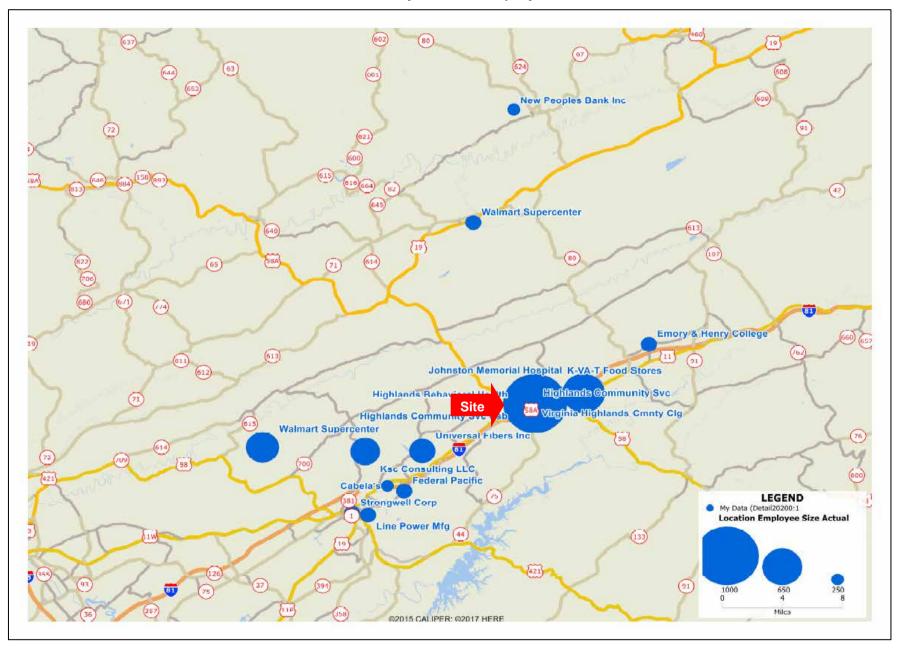

In the course of completing this study, we rated the neighborhood and the proximity to area amenities for the subject property and the most comparable properties on a 1-5 scale (1 being the worst and 5 being the best). The tables on the following pages give these ratings.

							Neighborh	ood Rating	s

MARKET AREA

Overview

Market areas are influenced by a variety of interrelated factors. These factors include site location, economic, and demographic characteristics (tenure, income, rent levels, etc.), local transportation patterns, physical boundaries (rivers, streams, topography, etc.), census geographies, and the location of comparable and/or potentially competing communities.

In areas where the county seat is the largest city, centrally located, and draws from the entire county, the county may be the market area. In the case where there are potentially competing communities in one county, the market area may be part of the county. In fact, the market area could include portions of adjacent counties. In this case, a combination of county subdivisions may be used to define the market area. In urban or suburban areas, the market area will be adjacent to the site extending to all locations of similar character with residents or potential residents likely to be interested in the project. In this case, county subdivisions, townships, or a combination of census tracts may be used to define the market area.

Allen & Associates recently conducted a series of property management interviews to better understand market areas and resident moving patterns for multifamily properties. Our study suggested that markets may be classified into the following general categories: urban, suburban and rural. Renters in urban markets are typically willing to move 5 to 10 minutes when looking for a new apartment. Our research also shows that renters in suburban markets are normally willing to move 10 to 15 minutes when looking for a new place to live. Renters in rural markets are typically willing to move 15 to 20 minutes when looking for a new apartment. We considered these general guidelines in our evaluation of the subject property.

Our study suggested that secondary market areas were generally a function of whether the proposed development was family or elderly. Our research suggested that secondary market demand for family properties ranged from 10 to 30 percent. Secondary market demand for elderly properties ranged from 10 to 50 percent. Although seniors move less frequently than younger renters, they are often willing to move longer distances when looking for housing. We considered these general secondary market guidelines in our evaluation of the subject property.

Our primary and secondary market area definitions are found below.

Primary Market Area

We defined the primary market area by generating a 25-minute drive time zone around the subject property. We also considered existing concentrations of multifamily properties and the nearest census tract boundaries in our analysis.

Primary market area, drive time and existing multifamily maps are found in the following pages. The primary market area included all or part of the following census tracts:

Census Tract	County	State
51167030300	Russell County	Virginia
51167030401	Russell County	Virginia
51167030600	Russell County	Virginia
51191010100	Washington County	Virginia
51191010200	Washington County	Virginia
51191010300	Washington County	Virginia
51191010401	Washington County	Virginia
51191010402	Washington County	Virginia
51191010501	Washington County	Virginia
51191010502	Washington County	Virginia
51191010601	Washington County	Virginia
51191010602	Washington County	Virginia
51191010700	Washington County	Virginia
51191010800	Washington County	Virginia

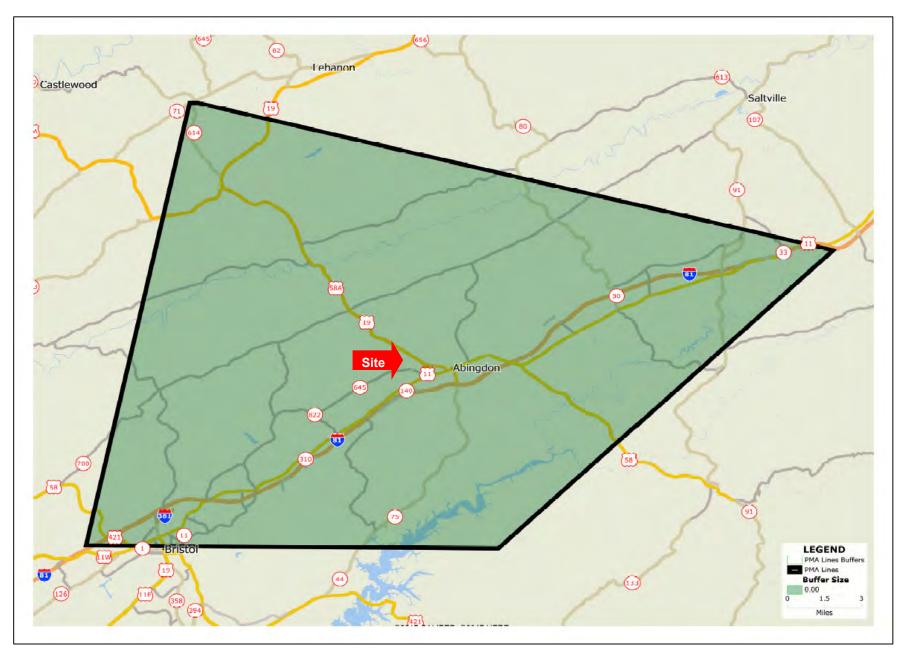

51191010900	Washington County	Virginia
51191011000	Washington County	Virginia
51520020100	Bristol city	Virginia
51520020200	Bristol city	Virginia
51520020300	Bristol city	Virginia
51520020400	Bristol city	Virginia

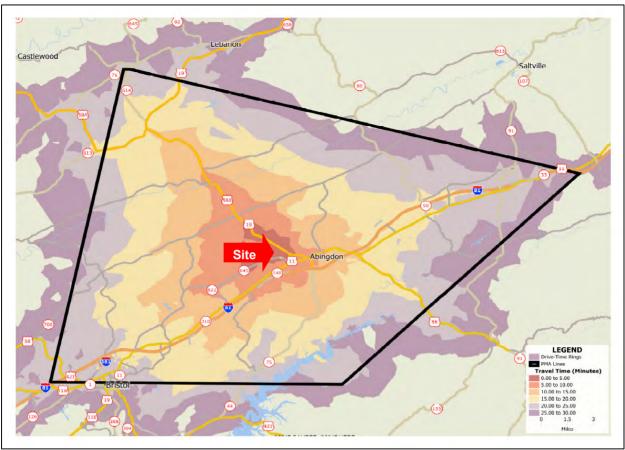

The primary market area includes a population of 63,477 persons and covers a total of 374.6 square miles, making it 21.8 miles across on average.

Secondary Market Area

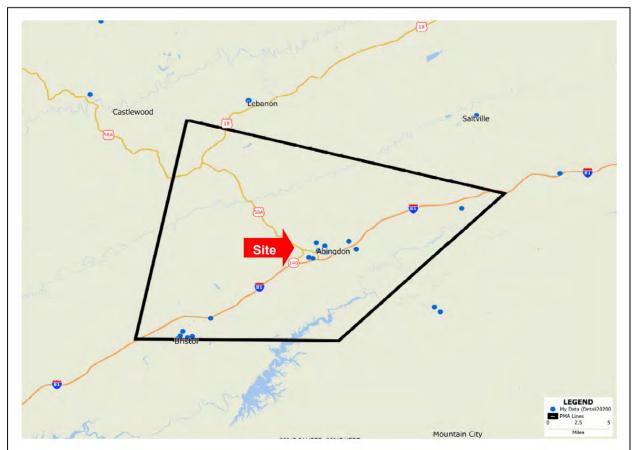

We estimate that up to 20 percent of demand will come from areas outside of the primary market area.

ECONOMIC OUTLOOK

In this section we conduct an analysis of the regional economy. For purposes of our analysis, we define the region as Bristol City along with Russell & Washington Counties, Virginia. A map depicting the Region is found below.

Employment by Industry

The Bureau of Labor Statistics (BLS) tracks establishment employment by major industry. In the table below we present the current breakdown and percent distribution. The data set comes from the Bureau of Labor Statistics (BLS) via Woods & Pool Economics.

Establishment Employment			
Industry	Region	Reg %	US %
Farm Employment	2,844	5.4%	1.3%
Forestry, Fishing, Related Activities And Other Employment	227	0.4%	0.5%
Mining Employment	716	1.3%	0.7%
Utilities Employment	117	0.2%	0.3%
Construction Employment	2,352	4.4%	5.5%
Manufacturing Employment	5,843	11.0%	6.7%
Wholesale Trade Employment	1,869	3.5%	3.6%
Retail Trade Employment	7,199	13.6%	10.3%
Transportation And Warehousing Employment	1,819	3.4%	3.5%
Information Employment	505	1.0%	1.7%
Finance And Insurance Employment	1,833	3.5%	5.3%
Real Estate And Rental And Lease Employment	1,661	3.1%	4.7%
Professional And Technical Services Employment	2,156	4.1%	6.9%
Management Of Companies And Enterprises Employment	860	1.6%	1.3%
Administrative And Waste Services Employment	1,848	3.5%	6.0%
Educational Services Employment	774	1.5%	2.4%
Health Care And Social Assistance Employment	5,517	10.4%	11.6%
Arts, Entertainment, And Recreation Employment	647	1.2%	2.2%
Accommodation And Food Services Employment	4,456	8.4%	7.5%
Other Services, Except Public Administration Employment	2,785	5.2%	5.8%
Federal Civilian Government Employment	281	0.5%	1.4%
Federal Military Employment	311	0.6%	0.9%
State And Local Government Employment	6,468	12.2%	9.8%
Establishment Employment	53,088	100.0%	100.0%

Source: W&P Economics

Regional establishment employment currently stands at 53,088. The data suggests that Retail Trade is the largest employment category accounting for 13.6% of total regional employment. State and Local Government is the second largest category accounting for 12.2% of total employment. Manufacturing is the third largest category accounting for 11.0% of total employment. Health Care and Social Assistance is the fourth largest category accounting for 10.4% of total employment. Accommodation and Food Services is the fifth largest category accounting for 8.4% of total employment.

Economists generally classify employment two ways: basic and non-basic. Basic employment, which is considered to be the engine of a local economy, includes industries that rely on external factors to fuel demand. For instance, mining, logging and manufacturers are frequently considered basic employers. Goods for these industries are shipped outside the location where they are produced. Non-basic employers depend largely on local demand and usually employ local workers. For example, grocery stores and restaurants are sometimes considered non-basic employers.

The Location Quotient (LQ) technique is the most common method of identifying basic industries for a given economy. The LQ technique compares the share of workers in each industry of a given economy with that of a larger reference economy. If the number of workers in the given economy is greater than that of the reference economy, these are considered to be basic industries because they fill needs beyond those of the reference community.

In the table above we highlight the basic industries for the region. The distribution of employment in these industries exceeds that for the United States. These basic industries represent about 28,386 employees or about 53.5% of total regional employment. These are the industries that drive the regional economy.

Earnings by Industry

The Bureau of Labor Statistics (BLS) tracks average earnings by major industry. In the table below we present the current breakdown and rank. The data set comes from the Bureau of Labor Statistics (BLS) via Woods & Pool Economics.

Average Earnings (2009 \$)		
Industry	Earnings	Rank
Farm Employment	\$2,036	23
Forestry, Fishing, Related Activities And Other Employment	\$26,687	18
Mining Employment	\$203,342	1
Utilities Employment	\$105,513	2
Construction Employment	\$37,454	12
Manufacturing Employment	\$58,092	5
Wholesale Trade Employment	\$45,971	9
Retail Trade Employment	\$26,905	17
Transportation And Warehousing Employment	\$49,343	7
Information Employment	\$41,881	10
Finance And Insurance Employment	\$34,004	13
Real Estate And Rental And Lease Employment	\$15,952	22
Professional And Technical Services Employment	\$40,620	11
Management Of Companies And Enterprises Employment	\$99,329	3
Administrative And Waste Services Employment	\$26,236	19
Educational Services Employment	\$33,305	15
Health Care And Social Assistance Employment	\$46,689	8
Arts, Entertainment, And Recreation Employment	\$21,587	20
Accommodation And Food Services Employment	\$19,284	21
Other Services, Except Public Administration Employment	\$33,411	14
Federal Civilian Government Employment	\$87,512	4
Federal Military Employment	\$29,151	16
State And Local Government Employment	\$52,291	6
Establishment Employment	\$40,430	\geq

Source: W&P Economics

The data suggests that Mining is the highest paid industry averaging \$203,342 per employee. Utilities is the second highest paid industry averaging \$105,513 per employee. Management of Companies is the third highest paid profession averaging \$99,329 per employee. Federal Civilian Government is the fourth highest paid industry averaging \$87,512 per employee. Manufacturing is the fifth highest paid category averaging \$58,092 per employee. These figures are compared with regional Average Earnings of \$40,430 per employee.

The highlighted industries represent basic industries for the region. Average earnings for these basic industries comes to \$65,897 or 63.0% higher than average for the region.

Top Employers

The table below gives a listing of the region's top employers. The data comes from InfoUSA and includes a primary industry description for each employer.

		Top Employers		
Name	Employees	SIC Code	Industry Description	Location Type
K-VA-T Food Stores	1,001	5099-98	Distribution Centers (Whls)	-
Johnston Memorial Hospital	687	8062-02	Hospitals	-
Walmart Supercenter	550	5311-02	Department Stores	Branch
Ksc Consulting LLC	499	8711-06	Engineers	-
Universal Fibers Inc	450	2655-01	Fiber & Fiber Products (Mfrs)	Branch

Highlands Behavioral Health	300	8063-01	Mental Health Services	-
Highlands Community Svc	300	8999-99	Services NEC	-
Highlands Community Svc Csb	300	8999-99	Services NEC	-

Source: InfoUSA

The top employers include: (1) K-VA-T Food Stores (1001 employees); (2) Johnston Memorial Hospital (687 employees) and; (3) Walmart Supercenter (550 employees).

Population

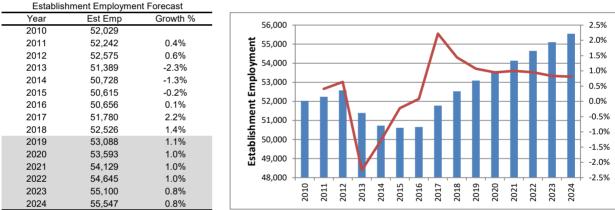

In this section we present population data for the region. The table and graph below show historic data since 2010. The historic data comes from the US Census; the forecast comes from Woods & Pool Economics.

Population decreased from 101,599 in 2010 to 99,301 in 2018 and is anticipated to increase to 101,773 in 2024.

Establishment Employment

In this section we present establishment employment data for the region. The table and graph below show historic data since 2010. The historic data comes from the Bureau of Labor Statistics (BLS); the forecast comes from Woods & Pool Economics.

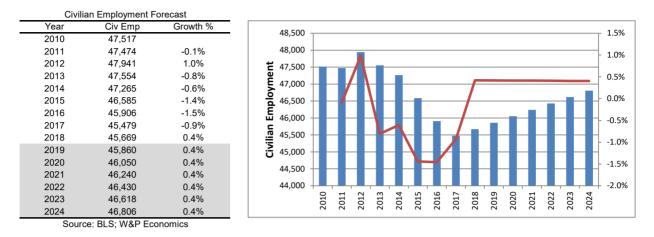

Source: BLS; W&P Economics

Establishment employment increased from 52,029 in 2010 to 52,526 in 2018 and is anticipated to increase to 55,547 in 2024.

Civilian Employment

In this section we present civilian employment data for the region. The table and graph below show historic data since 2010. The historic data comes from the Bureau of Labor Statistics (BLS); the forecast utilizes data from Woods & Pool Economics.

Civilian employment decreased from 47,517 in 2010 to 45,669 in 2018 and is anticipated to increase to 46,806 in 2024.

Labor Force and Unemployment

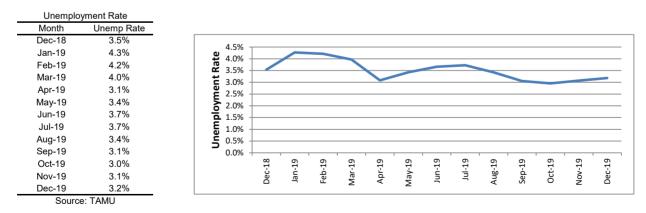

In this section we take a look at the labor force and unemployment. The table below shows civilian employment, unemployment and labor force statistics for the region since 2010. The data set comes from the Bureau of Labor Statistics (BLS) via the Texas A&M Real Estate Center.

	Labor Force & Unemployment				
Year	Civ Emp	Unemp	Lab Force	Unemp Rate	
2010	47,517	4,120	43,397	8.7%	
2011	47,474	3,755	43,719	7.9%	
2012	47,941	3,500	44,441	7.3%	
2013	47,554	3,324	44,231	7.0%	
2014	47,265	3,020	44,245	6.4%	
2015	46,585	2,483	44,102	5.3%	
2016	45,906	2,359	43,547	5.1%	
2017	45,479	2,019	43,459	4.4%	
2018	45,669	1,665	44,004	3.6%	

Source: BLS; Texas A&M Real Estate Center

Unemployment decreased from 4,120 in 2010 to 1,665 in 2018. The unemployment rate decreased from 8.7% in 2010 to 3.6% in 2018.

The table and graph below show the unemployment rate for the region for the past 12 months.

The Unemployment Rate for the Region came in at 3.5% in December 2018 and 3.2% in December 2019.

Building Permits

In this section we look at building permits. The table and graph below show historical data for the region since 2000. The data set comes from the US Census.

		Building Permits		
Year	1 Family	2-4 Family	5+ Family	Total
2000	374	10	5	389
2001	326	21	5	352
2002	385	10	80	475
2003	334	32	108	474
2004	577	31	32	640
2005	377	26	115	518
2006	461	4	0	465
2007	399	20	37	456
2008	180	67	44	291
2009	131	23	10	164
2010	142	17	0	159
2011	157	4	20	181
2012	108	23	0	131
2013	105	2	0	107
2014	82	4	9	95
2015	84	6	0	90
2016	90	56	0	146
2017	77	14	0	91
2018	78	10	0	88
	S	ource: US Census	3	

Building permits for the region increased from 352 in 2001 to 640 in 2004, before decreasing to 90 in 2015 and decreasing to 88 in 2018.

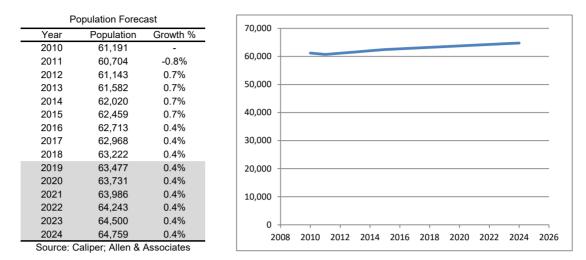

Conclusion

We anticipate moderate economic growth accompanied by modest population growth for the region over the next several years.

DEMOGRAPHIC CHARACTERISTICS

Overburdened Renter Households

The following tables give overburdened renter household data for the Market Area. The data set comes from the U.S. Census Bureau.

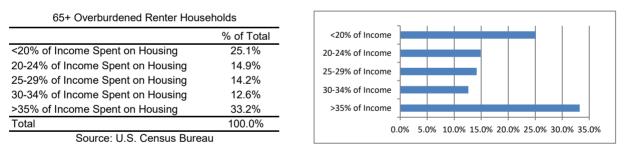

Our research suggests that 25.9 percent of the renter households in this market area are overburdened, paying more than 35 percent of their income towards housing-related costs. Our research also suggests that 33.5 percent of the renter households are overburdened to 30 percent of income.

Source: U.S. Census Bureau

Our research suggests that 30.9 percent of the 55+ renter households in this market area are overburdened, paying more than 35 percent of their income towards housing-related costs. Our research also suggests that 41.7 percent of the 55+ renter households are overburdened to 30 percent of income.

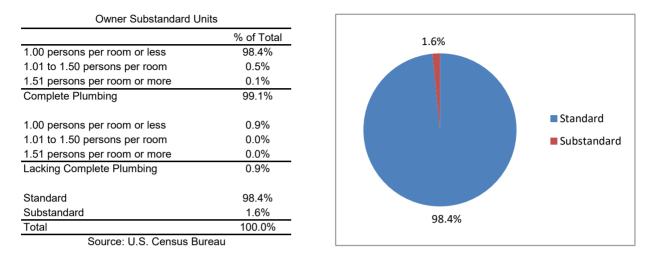

Our research suggests that 33.2 percent of the 65+ renter households in this market area are overburdened, paying more than 35 percent of their income towards housing-related costs. Our research also suggests that 45.8 percent of the 65+ renter households are overburdened to 30 percent of income.

Owner Substandard Units

The U.S. Census Bureau defines substandard housing units as follows: (1) Units without complete plumbing; or (2) Units with 1.00 or more persons per room.

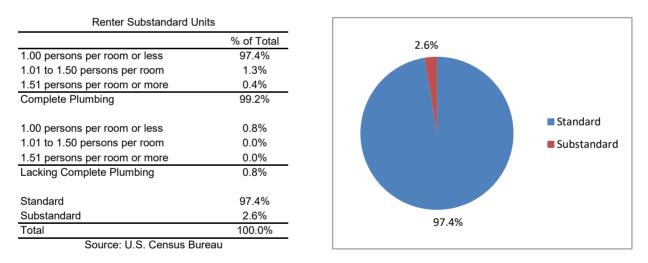

The following tables give owner substandard housing unit data for occupied housing units in the nation, state, region and market area. The data comes from the U.S. Census Bureau:

Our research suggests that 1.6 percent of occupied owner housing units in the market area are substandard.

Renter Substandard Units

The following tables give renter substandard housing unit data for occupied housing units in the nation, state, region and market area. The data comes from the U.S. Census Bureau:

Our research suggests that 2.6 percent of renter owner housing units in the market area are substandard.

Owner Movership

The following tables give owner household movership data for the market area with an estimated breakout by household size. The data comes from the U.S. Census Bureau and the American Housing Survey:

Owner Movership, by Size

Our research suggests an elderly renter movership rate of 8.0 percent.

SUPPLY ANALYSIS

In conducting our analysis, we began by attempting to compile a list of every multifamily property with 10 or more units in the market area. We included conventionally-financed multifamily communities as well as properties financed by the local housing authority and the state housing finance agency in our listing. We even included properties financed by and/or subsidized by USDA and/or HUD. Finally, we included properties that are either proposed or currently under construction. The result was a listing of projects with 10 or more units - whether existing, under construction, or proposed - for this area. Our rental property inventory listing is found in the pages that follow.

A map showing the location of the properties included in the rental property inventory is found in the pages that follow. Properties identified with red pushpins have 100 percent market rate units (market rate properties), properties identified with yellow pushpins have a mixture of market rate / restricted / subsidized units (restricted properties), and properties identified with blue pushpins have 100 percent project-based rental assistance (subsidized properties).

After accounting for any unconfirmed properties and any properties that are located outside the defined market area, we arrived at a list of confirmed market area properties. This was the listing of properties upon which our analysis is based. In our opinion, the properties included on this list give a credible picture of market conditions as of the effective date of this report. This listing is found in the pages that follow.

Our next step was to compile a master list of unrestricted market rate rent comparables from the listing of confirmed properties. We eliminated any properties which were either under construction, being renovated, in lease up, or which were unstabilized for one reason or another. We identified market rate properties of similar age and condition to the subject property. If we were unable to identify a sufficient number of market rate comparables in the market area, we included market rate properties from outside the market area. If we were still unable to identify a sufficient number of market rate comparables, we included rent restricted properties - provided, however, that the rents charged at these properties were below statuatory limits and similar to the rents charged at the market rate properties in the market area (suggesting that these rent restricted properties were *de facto* market rate properties).

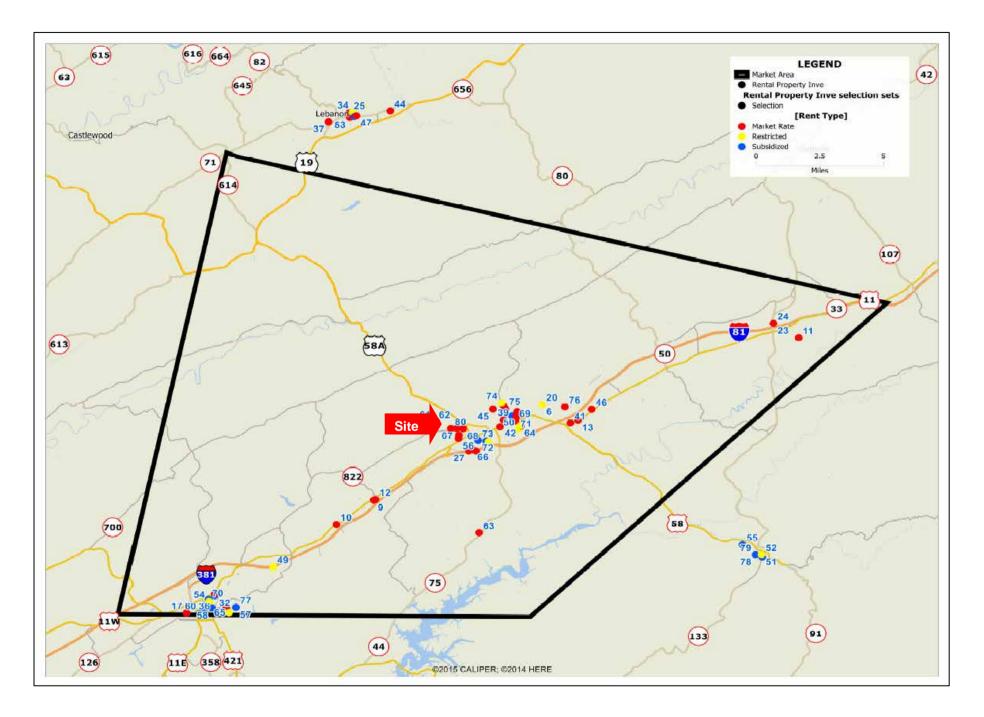

Finally, we compiled a master list of restricted rent comparables from the listing of confirmed properties. We used the same approach described above for unrestricted market rate properties.

The resulting master lists of rent comparables and accompanying locator maps are found in this section as well. Detailed write-ups for the properties included on these lists are found in the Appendix. We include write-ups for *all* of the rent comparables identified on our master lists, regardless of whether they ended up being selected as one of the *best* rent comparables. We did this for two reasons: (1) To be transparent; and (2) To provide the reader with context regarding our selection process.

The balance of this section includes a breakdown of confirmed market area properties by rent type, project status, year built, and financing source. We also include a rent, unit mix, and amenity summary for confirmed market area properties. Finally, we provide summary of vouchers, concessions, and waiting lists for the properties included in this report.

Source: Allen & Associates

Our analysis includes a total of 41 confirmed market area properties consisting of 1,595 units. The occupancy rate for these units currently stands at 94 percent. This rate reflects the occupancy for all confirmed market area units, regardless of project status (stabilized, under construction, proposed, etc.).

Confirmed market area properties break down by rent type and tenure as shown in the tables above.

Supply Analysis

Rental Property Inventory, Confirmed, Inside Market Area, by Project Status

The following tables and graphs provide a summary of the confirmed market area properties included in this analysis broken out by project status:

Occupancies of stabilized market area properties broken out by occupancy type (elderly or family) and rent type (subsidized, restricted or market rate) are found below:

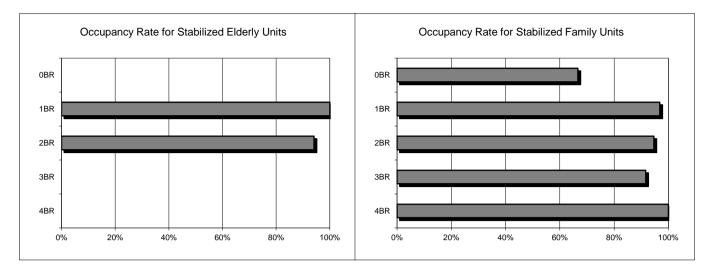

Our research suggests the following occupancy levels for the 142 stabilized elderly units in this market area:

- Subsidized, 100 percent (71 units in survey)
- Restricted, 99 percent (71 units in survey)
- Market Rate, not applicable (0 units in survey)

Our research suggests the following occupancy levels for the 1,404 stabilized family units in this market area:

- Subsidized, 99 percent (301 units in survey)
- Restricted, 89 percent (277 units in survey)
- Market Rate, 95 percent (826 units in survey)

Occupancy rates for stabilized market area properties broken out by occupancy type (elderly or family) and unit type are found below (supporting data is found in the pages that follow):

Our research suggests the following occupancy levels for the 142 stabilized elderly units in this market area:

- 0-Bedroom, not applicable (0 units in survey)
- 1-Bedroom, 100 percent (125 units in survey)
- 2-Bedroom, 94 percent (17 units in survey)
- 3-Bedroom, not applicable (0 units in survey)
- 4-Bedroom, not applicable (0 units in survey)

Our research suggests the following occupancy levels for the 1,404 stabilized family units in this market area:

- 0-Bedroom, 67 percent (21 units in survey)
- 1-Bedroom, 97 percent (318 units in survey)
- 2-Bedroom, 95 percent (861 units in survey)
- 3-Bedroom, 92 percent (192 units in survey)
- 4-Bedroom, 100 percent (12 units in survey)

Our research suggests the following unit mix for the 142 confirmed elderly units located in this market area:

- 0-Bedroom, not applicable (0 units in survey)
- 1-Bedroom, 88 percent (125 units in survey)
- 2-Bedroom, 12 percent (17 units in survey)
- 3-Bedroom, not applicable (0 units in survey)
- 4-Bedroom, not applicable (0 units in survey)

Our research suggests the following unit mix for the 1,453 confirmed family units located in this market area:

- 0-Bedroom, 1 percent (21 units in survey)
- 1-Bedroom, 23 percent (338 units in survey)
- 2-Bedroom, 61 percent (883 units in survey)
- 3-Bedroom, 14 percent (199 units in survey)
- 4-Bedroom, 1 percent (12 units in survey)

Rental Property Inventory, Confirmed, Inside Market Area, Amenity Summary

Desited Description of the Configure of the Side Medical Association Operation

Source: Allen & Associates

Our research suggests that 7 percent of confirmed market area properties are 1 story in height, 93 percent are 2-4 stories in height, 0 percent are 5-10 stories in height, and 0 percent are over 10 stories in height. In addition, surveyed properties benefit from the following project amenities: 10 percent have a business/computer center, 27 percent have a community center, 12 percent have a fitness center, 17 percent have a playground, and 5 percent have a sports court.

Our research also suggests that the following unit amenities are present at surveyed properties: 90 percent have blinds, 93 percent have carpeting, 66 percent have patios/balconies, and 15 percent have outside storage. Surveyed properties also include the following kitchen amenities: 100 percent have a stove, 100 percent have a refrigerator, 46 percent have a disposal, 61 percent have a dishwasher, and 7 percent have a microwave.

In addition, 83 percent of confirmed market area properties have central heat while 78 percent have central air. Our research also suggests that 100 percent of surveyed properties have open parking. A total of 39 percent of area properties have central laundry facilities, while 41 percent have washer/dryer hookups, and 15 percent have washer/dryer units in each residential unit.

A total of 12 percent of confirmed market area properties have call buttons, 5 percent have controlled access, and 5 percent have security alarms.

It is also our understanding that the majority of confirmed market area properties provide cable access.

Finally, in the following pages we provide a summary of vouchers, concessions and waiting lists for the confirmed market area properties included in this report. We also include any absorption information we have uncovered as part of our research.

RENT COMPARABILITY ANALYSIS

In this section we develop restricted and unrestricted market rent conclusions for the subject property on an "as if complete & stabilized" basis. Our analysis begins with an evaluation of unrestricted market rents.

Unrestricted Rent Analysis

In this section we develop an unrestricted market rent conclusion for the subject property units. Our analysis began by selecting comparable rentals to use to develop estimates of market rents for the units at the subject property, assuming that the subject was an unrestricted property. Our selection of comparables was based on location, age, condition, unit mix and amenities of the comparable properties relative to the subject property.

Rental Property Inventory, by Unit Type

In the following pages we present an inventory of properties included in this analysis. Rents for these properties, broken out by unit type, were used in selecting the rent comparables used in this analysis.

The properties that we consider to be comparable to the subject property are highlighted in the tables found in the following pages. We attempted to select stabilized market rate properties as comparables for purposes of our rent comparability analysis.

Comparables with restricted rents are used when a sufficient number of market rent comparables are not available and when maximum allowable rents for properties with restricted rents exceed prevailing rents in the area. In the event that program rental rates exceed market rental rates, restricted units are, in fact, *de facto* market rate units.

Rent Comparables, Market Rate, Map

A map showing the location of the properties selected as comparables in this analysis is found in the following pages. Properties identified with red pushpins have market rents, properties identified with yellow pushpins have restricted rents, and properties identified with blue pushpins have subsidized rents. Detailed write-ups for the select rent comparables are found in the Appendix to this report.

Rent Comparability Grids

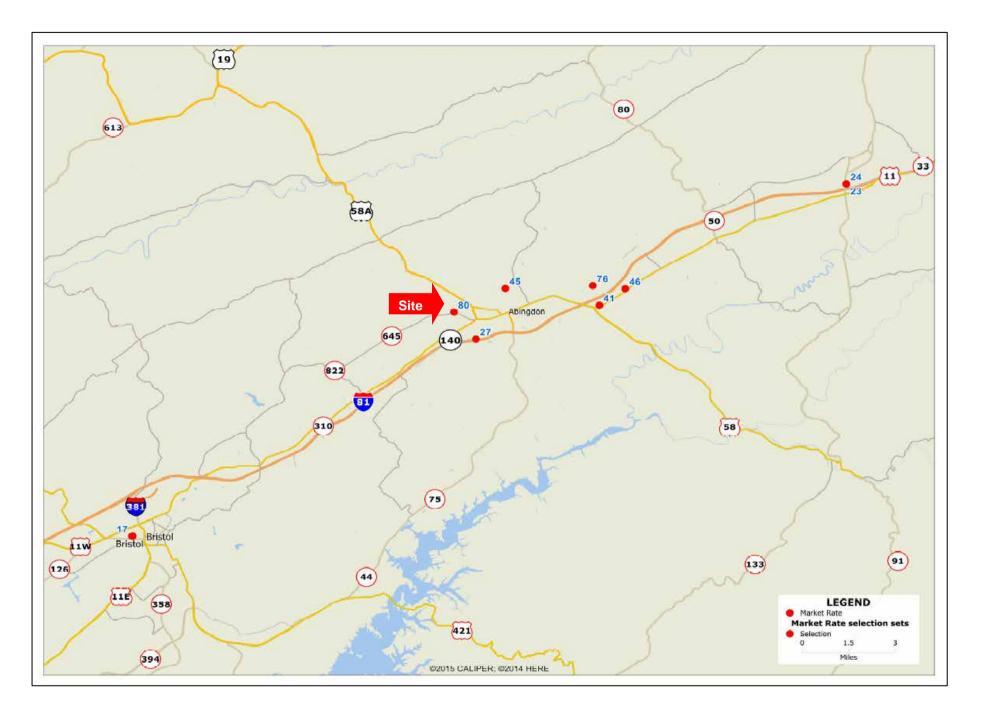

Our analysis employed the use of rent comparability grids and resulted in an unrestricted market rent estimate for each of the subject's unit types. These grids and a narrative describing our rent adjustments are found in the following pages.

Rental Property Inventory, 3-Bedroom Units

Rent Adjustments

Our analysis included a property management survey and a technique known as "statistical extraction" to help us identify the best adjustments to use. Statistical extraction, which is similar to the matched pair method, helped us derive the optimal adjustments for our particular data set.

Here's a hypothetical example to illustrate how we derived our rent adjustments. Assume that property managers tell us we should expect rent adjustments ranging from \$0.00 to \$0.50 per square foot for a particular market. Next, assume that we select 25 rent comparables with an adjusted sample standard deviation (a statistical measure of variability) of \$100. We employ a square foot rent adjustment of \$0.10 for each comparable resulting in an adjusted sample standard deviation of \$90. This tells us that the assumed adjustment "explained" some of the variability in the data. We repeat this process for adjustments of \$0.20, \$0.30, \$0.40 and \$0.50 which yielded adjusted sample standard deviations of \$80, \$70, \$65 and \$75, respectively. The \$0.40 square foot adjustment "explains" the most variability because any other adjustment yields a higher adjusted sample standard deviation. Consequently, a \$0.40 rent adjustment is the best adjustment for purposes of this example. This is a simplified example because we actually adjusted for numerous variables simultaneously in our analysis.

Many adjustments (bedroom count, bathroom count and square footage) are highly interrelated. Statistical extraction helped us unravel the interrelationships between these variables. Adjustments represent dollar amounts by which the subject property varies from the comparable properties. If the subject is superior a "plus" adjustment is made. If the subject is inferior a "minus" adjustment is made.

We used the Excel Solver function to help us with our analysis. The Solver function was programmed to minimize the adjusted standard deviation for our data set. We evaluated a total of 62 variables in 22 categories (AC systems, heating systems, technology, bedrooms, bathrooms, square feet, visibility, access, neighborhood, area amenities, condition, effective age, project amenities, elevator, unit amenities, storage, kitchen amenities, parking, laundry, security, on-site management, on-site maintenance) in an effort to identify the mix of adjustments that explained the most variability found in our raw data.

A discussion of our surveyed and concluded adjustments is found below.

Concessions

The first step in our analysis was to account for any concessions at the subject and the comparables. We considered the advertised street rent and concessions being offered and derived a net nent estimate for each comparable. Net rent, defined as advertised street rent minus monthly concessions, represents the cash rent paid by new residents at the various properties. This is the best measure of market value (prior to any other adjustments) for the comparables included in this analysis.

Tenant-Paid Utilities

The next step in our analysis was to account for differences in tenant-paid utilities between the comparable properties and the subject. We used the HUD Utility Schedule Model to derive our adjustments. The HUD model includes a current utility rate survey for the area. In the event that the tenant-paid utilities associated with a particular property are higher or lower than the subject, adjustments were made to account for the differences. Adjustments reflect the difference between the tenant-paid utilities for the comparable property minus that for the subject.

Technology

We accounted for technology (cable and internet access) offered in the rent for each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$0 per month for cable; internet access was valued at \$0.

Technology							
Adjustment	Survey	Range	Concluded				
Cable	\$0	\$50	\$0				
Internet	\$0	\$50	\$0				

Bedrooms

Our analysis also included an adjustment for the number of bedrooms at each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$85 per bedroom.

Bedrooms								
Adjustment	Surve	y Range	Concluded					
Bedrooms	\$0	\$200	\$85					

Bathrooms

Our analysis also included an adjustment for the number of bathrooms at each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$30 per bathroom.

Bathrooms							
Adjustment	Survey	/ Range	Concluded				
Bathrooms	\$0	\$100	\$30				

Square Feet

Our analysis also included an adjustment for square footage at each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$0.10 per square foot.

Square Feet								
Adjustment	Survey	Range	Concluded					
Square Feet	\$0.00	\$2.00	\$0.10					

Visibility

We also accounted for differences in visibility at each of the comparables as compared to the subject property in our analysis. Based on our field review, we assigned a visibility rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$100 per point for differences in visibility ratings between the subject and the comparables.

Visibility							
Adjustment	Survey	/ Range	Concluded				
Rating	\$0	\$100	\$100				

Access

Our analysis also included an adjustment for access at each of the comparables as compared to the subject property. Based on our field review, we assigned an access rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$0 per point for differences in access ratings between the subject and the comparables.

Access							
Adjustment	Survey	/ Range	Concluded				
Rating	\$0	\$100	\$0				

Neighborhood

We considered differences in neighborhood at each of the comparables as compared to the subject property in our analysis. Based on our field review and our evaluation of local demographic and crime data (presented earlier in this report), we assigned a neighborhood rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$0 per point for differences in neighborhood ratings between the subject and the comparables.

Neighborhood							
Adjustment	Survey	/ Range	Concluded				
Rating	\$0	\$100	\$0				

Area Amenities

We also accounted for area amenities for each of the comparables as compared to the subject property in our analysis. Based on our field review and our evaluation of local amenity data (presented earlier in this report), we assigned a local amenity rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$0 per point for differences in amenity ratings between the subject and the comparables.

Area Amenities							
Adjustment	Surve	/ Range	Concluded				
Rating	\$0	\$100	\$0				

Median Household Income

Our analysis also included an adjustment for median household income for the area in which each of the comparables is located as compared to the subject property. Statistical extraction resulted in an adjustment of \$0.0000 per dollar of median household income.

Median Household Income							
Adjustment	Survey	Range	Concluded				
Med HH Inc	\$0.0000	\$0.0000	\$0.0000				

Average Commute

Our analysis also included an adjustment for average commute for the area in which each of the comparables is located as compared to the subject property. Statistical extraction resulted in an adjustment of \$0.00 per each minute of commute.

Average Commute								
Adjustment	Survey	Range	Concluded					
Avg Commute	\$0.00	\$0.00	\$0.00					

Public Transportation

Our analysis also included an adjustment for the existence of public transportation within walking distance of each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$0.00 for public transportation.

Public Transportation						
Adjustment	Survey Range	Concluded				
Public Trans	\$0.00 \$0.00	\$0.00				

Personal Crime

Our analysis also included an adjustment for personal crime rates for the area in which each of the comparables is located as compared to the subject property. Statistical extraction resulted in an adjustment of \$0 per 0.01 percentage points.

Personal Crime							
Adjustment	Survey	Range	Concluded				
Personal Crime	\$0	\$0	\$0				

Condition

Our analysis also included an adjustment for the condition of each comparable as compared to the subject property. Based on our field review, we assigned a condition rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$50 per point for differences in condition ratings between the subject and the comparables.

Condition							
Adjustment	Survey	Range	Concluded				
Rating	\$10	\$50	\$50				

Effective Age

We considered differences in effective age in our analysis. Based on our field review, we estimated the effective age for each of the properties included in this analysis. Our estimates reflected the condition-adjusted age and remaining useful life of each property. Statistical extraction resulted in an adjustment of \$1.00 per year for differences in effective age between the subject and the comparables.

Effective Age							
Adjustment	Survey	Range	Concluded				
Rating	\$1.00	\$5.00	\$1.00				

Project Amenities

We considered the presence of various project amenities at the comparables as compared to the subject property. Project amenities include ball fields, BBQ areas, billiards, business/computer centers, car care centers, community centers, elevators, fitness centers, gazebos, hot tubs/Jacuzzis, horseshoe pits, lakes, libraries, movie theatres, picnic areas, playgrounds, pools, saunas, sports courts and walking trails. The survey range and our concluded adjustment for each amenity is summarized below.

Project Amenities							
Adjustment	Survey	Range	Concluded				
Ball Field	\$2	\$10	\$2				
BBQ Area	\$2	\$10	\$10				
Billiards	\$2	\$10	\$2				
Bus/Comp Ctrs	\$2	\$10	\$2				
Car Care Center	\$2	\$10	\$2				
Community Center	\$2	\$10	\$10				
Elevator	\$10	\$100	\$10				
Fitness Center	\$2	\$10	\$10				
Gazebo	\$2	\$10	\$2				
Hot Tub/Jacuzzi	\$2	\$10	\$2				
Horseshoe Pit	\$2	\$10	\$2				
Lake	\$2	\$10	\$2				
Library	\$2	\$10	\$2				
Movie Theatre	\$2	\$10	\$2				
Picnic Area	\$2	\$10	\$10				
Playground	\$2	\$10	\$10				
Pool	\$2	\$10	\$10				
Sauna	\$2	\$10	\$2				
Sports Court	\$2	\$10	\$10				
Walking Trail	\$2	\$10	\$2				

Unit Amenities

We considered the presence of various unit amenities at the comparables as compared to the subject property. Unit amenities include blinds, ceiling fans, carpeting/upgraded flooring, fireplaces, patios/balconies and storage. The survey range and our concluded adjustment for each amenity is summarized below.

Unit Amenities								
Adjustment	Survey	Range	Concluded					
Blinds	\$2	\$10	\$2					
Ceiling Fans	\$2	\$10	\$10					
Carpeting	\$2	\$10	\$2					
Fireplace	\$2	\$10	\$2					
Patio/Balcony	\$2	\$10	\$2					
Storage	\$10	\$50	\$10					

Kitchen Amenities

We considered the presence of various kitchen amenities at the comparables as compared to the subject property. Kitchen amenities include stoves, refrigerators, disposals, dishwashers and microwaves. The survey range and our concluded adjustment for each amenity is summarized below.

Kitchen Amenities									
Adjustment	Survey	Range	Concluded						
Stove	\$2	\$10	\$2						
Refrigerator	\$2	\$10	\$2						
Disposal	\$2	\$10	\$10						
Dishwasher	\$2 \$10		\$10						
Microwave	\$2	\$10	\$10						

Parking

We also adjusted for differing types of parking configurations. We classified parking five ways: (1) Garage, (2) Covered; (3) Assigned, (4) Open and (5) No parking offered. Statistical extraction resulted in an adjustment of \$50 per month for garages; covered parking was valued at \$20; assigned parking was valued at \$10; open parking was valued at \$0; no parking was valued at \$0.

Parking								
Adjustment	Survey	Range	Concluded					
Garage	\$50	\$200	\$50					
Covered	\$20	\$100	\$20					
Assigned	\$10	\$50	\$10					
Open	\$0	\$0	\$0					
None	\$0	\$0	\$0					

Laundry

We also evaluated differing types of laundry configurations. We classified laundry amenities three ways: (1) Central Laundry, (2) Washer/Dryer Units; and (3) Washer/Dryer Hookups. Our analysis resulted in an adjustment of \$25 per month for central laundries; washer/dryer units were valued at \$50; washer/dryer hookups were valued at \$5.

Laundry									
Adjustment	Survey	Range	Concluded						
Central	\$5	\$25	\$25						
W/D Units	\$10 \$50		\$50						
W/D Hookups	\$5	\$25	\$5						

Security

We considered the presence of various security amenities at the comparables as compared to the subject property. Security amenities include call buttons, controlled access, courtesy officers, monitoring, security alarms and security patrols. The survey range and our concluded adjustment for each amenity is summarized below.

Security								
Adjustment	Survey	/ Range	Concluded					
Call Buttons	\$2	\$10	\$2					
Controlled Access	\$2	\$10	\$2					
Courtesy Officer	\$2	\$10	\$2					
Monitoring	\$2	\$10	\$2					
Security Alarms	\$2	\$10	\$2					
Security Patrols	\$2	\$10	\$2					

Rent Conclusion, 3BR-2BA-1103sf

The development of our rent conclusion for the 3BR-2BA-1103sf units is found below.

Our analysis included the evaluation of a total of 23 unit types found at 8 properties. We selected the 23 most comparable units to utilize as rent comparables for purposes of this analysis. A write-up for each of the properties included in this analysis is found in the Appendix.

Our analysis included the adjustments developed in the previous section. Adjustments represent dollar amounts by which the subject property varies from the comparable properties. If the subject is better, a "plus" adjustment is made. If the subject is inferior, a "minus" adjustment is made. In the table below, we summarize the adjustments and the resulting indicated rent for the top 23 comparables included in this analysis. The units that we consider most comparable are highlighted for the reader's reference.

Rent Conclusion, 3BR-2BA-961sf

The development of our rent conclusion for the 3BR-2BA-961sf units is found below.

Our analysis included the evaluation of a total of 23 unit types found at 8 properties. We selected the 23 most comparable units to utilize as rent comparables for purposes of this analysis. A write-up for each of the properties included in this analysis is found in the Appendix.

Our analysis included the adjustments developed in the previous section. Adjustments represent dollar amounts by which the subject property varies from the comparable properties. If the subject is better, a "plus" adjustment is made. If the subject is inferior, a "minus" adjustment is made. In the table below, we summarize the adjustments and the resulting indicated rent for the top 23 comparables included in this analysis. The units that we consider most comparable are highlighted for the reader's reference.

Rent Conclusion, 3BR-2BA-1090sf

The development of our rent conclusion for the 3BR-2BA-1090sf units is found below.

Our analysis included the evaluation of a total of 23 unit types found at 8 properties. We selected the 23 most comparable units to utilize as rent comparables for purposes of this analysis. A write-up for each of the properties included in this analysis is found in the Appendix.

Our analysis included the adjustments developed in the previous section. Adjustments represent dollar amounts by which the subject property varies from the comparable properties. If the subject is better, a "plus" adjustment is made. If the subject is inferior, a "minus" adjustment is made. In the table below, we summarize the adjustments and the resulting indicated rent for the top 23 comparables included in this analysis. The units that we consider most comparable are highlighted for the reader's reference.

Unrestricted Market Rent Conclusion

Based on our evaluation of the rents at the select comparable properties, and considering the location, quality and amenities of the subject property, we conclude the following market rents for the subject property units, assuming that the subject were an unrestricted property:

Unrestricted Market Rent Conclusion										
Unit Type / Income Limit / Rent Limit	HOME	Subsidized	Units	Market	Proposed	Advantage				
3BR-2BA-1103sf / 60% of AMI / 40% of AMI	no	No	3	\$745	\$389	47.8%				
3BR-2BA-1103sf / 60% of AMI / 50% of AMI	no	No	3	\$745	\$500	32.9%				
3BR-2BA-961sf / 60% of AMI / 50% of AMI	no	No	5	\$725	\$500	31.0%				
3BR-2BA-961sf / 60% of AMI / 60% of AMI	no	No	3	\$725	\$500	31.0%				
3BR-2BA-1090sf / 60% of AMI / 60% of AMI	no	No	8	\$735	\$500	32.0%				
Total / Average			22	\$734	\$485	34.0%				

Our analysis suggests an average unrestricted market rent of \$734 for the subject property. This is compared with an average proposed rent of \$485, yielding an unrestricted market rent advantage of 34 percent. Overall, the subject property appears to be priced at or below unrestricted market rents for the area.

We selected a total of 9 properties as comparables for purposes of our analysis. The average occupancy at the select rent comparables currently stands at 96 percent.

Occupancy rates for the selected rent comparables are broken out below:

Occupancy Rate, Select Comparables										
	Subsidized	20% of AMI	30% of AMI	40% of AMI	50% of AMI	60% of AMI	80% of AMI	Market		
0-Bedroom										
1-Bedroom										
2-Bedroom								96%		
3-Bedroom								97%		
4-Bedroom										
Total								96%		

Occupancy rates for all stabilized market area properties are broken out below:

Occupancy Rate, Stabilized Properties											
	Subsidized	20% of AMI	30% of AMI	40% of AMI	50% of AMI	60% of AMI	80% of AMI	Market			
0-Bedroom								67%			
1-Bedroom	99%			100%	95%		91%	97%			
2-Bedroom	99%			94%	95%		73%	94%

4-Bedroom	100%										
Total	99%			96%	90%		79%	95%			

HUD conducts an annual rent survey to derive Fair Market Rent estimates for an area. Based on this, 2bedroom rents for the area grew from \$571 to \$700 since 2010. This represents an average 2.5% annual increase over this period.

Fair market rent data for the area is found below:

Restricted Rent Analysis

In this section we develop a restricted market rent conclusion and an achievable rent conclusion for the subject property units. Our analysis began by selecting comparable rentals to use to develop estimates of market rents for the units at the subject property, assuming that the subject was a restricted property. Our selection of comparables was based on location, age, condition, unit mix and amenities of the comparable properties relative to the subject property.

Rental Property Inventory, by Unit Type

In the following pages we present an inventory of properties included in this analysis. Rents for these properties, broken out by unit type, were used in selecting the rent comparables used in this analysis.

The properties that we consider to be comparable to the subject property are highlighted in the tables found in the following pages. We attempted to select stabilized restricted rent properties as comparables for purposes of our rent comparability analysis.

Comparables with market rents are used when a sufficient number of restricted rent comparables are not available and when maximum allowable rents for properties with restricted rents exceed prevailing rents in the area. In the event that program rental rates exceed market rental rates, restricted units are, in fact, *de facto* market rate units.

Rent Comparables, Restricted Rent, Map

A map showing the location of the properties selected as comparables in this analysis is found in the following pages. Properties identified with red pushpins have market rents, properties identified with yellow pushpins have restricted rents, and properties identified with blue pushpins have subsidized rents. Detailed write-ups for the select rent comparables are found in the Appendix to this report.

Rent Comparability Grids

Our analysis employed the use of rent comparability grids and resulted in a restricted market rent estimate for each of the subject's unit types. These grids and a narrative describing our rent adjustments are found in the following pages.

	Ov	rview				Rents							
Key Property Name	Built	Renovated	Rent Type	Occ Type	Status	Sub	30%	40%	50%	60%	70%	80%	Mkt

Rental Property Inventory, 3-Bedroom Units

Rent Adjustments

Our analysis included a property management survey and a technique known as "statistical extraction" to help us identify the best adjustments to use. Statistical extraction, which is similar to the matched pair method, helped us derive the optimal adjustments for our particular data set.

Here's a hypothetical example to illustrate how we derived our rent adjustments. Assume that property managers tell us we should expect rent adjustments ranging from \$0.00 to \$0.50 per square foot for a particular market. Next, assume that we select 25 rent comparables with an adjusted sample standard deviation (a statistical measure of variability) of \$100. We employ a square foot rent adjustment of \$0.10 for each comparable resulting in an adjusted sample standard deviation of \$90. This tells us that the assumed adjustment "explained" some of the variability in the data. We repeat this process for adjustments of \$0.20, \$0.30, \$0.40 and \$0.50 which yielded adjusted sample standard deviations of \$80, \$70, \$65 and \$75, respectively. The \$0.40 square foot adjustment "explains" the most variability because any other adjustment yields a higher adjusted sample standard deviation. Consequently, a \$0.40 rent adjustment is the best adjustment for purposes of this example. This is a simplified example because we actually adjusted for numerous variables simultaneously in our analysis.

Many adjustments (bedroom count, bathroom count and square footage) are highly interrelated. Statistical extraction helped us unravel the interrelationships between these variables. Adjustments represent dollar amounts by which the subject property varies from the comparable properties. If the subject is superior a "plus" adjustment is made. If the subject is inferior a "minus" adjustment is made.

We used the Excel Solver function to help us with our analysis. The Solver function was programmed to minimize the adjusted standard deviation for our data set. We evaluated a total of 62 variables in 22 categories (AC systems, heating systems, technology, bedrooms, bathrooms, square feet, visibility, access, neighborhood, area amenities, condition, effective age, project amenities, elevator, unit amenities, storage, kitchen amenities, parking, laundry, security, on-site management, on-site maintenance) in an effort to identify the mix of adjustments that explained the most variability found in our raw data.

A discussion of our surveyed and concluded adjustments is found below.

Concessions

The first step in our analysis was to account for any concessions at the subject and the comparables. We considered the advertised street rent and concessions being offered and derived a net nent estimate for each comparable. Net rent, defined as advertised street rent minus monthly concessions, represents the cash rent paid by new residents at the various properties. This is the best measure of market value (prior to any other adjustments) for the comparables included in this analysis.

Tenant-Paid Utilities

The next step in our analysis was to account for differences in tenant-paid utilities between the comparable properties and the subject. We used the HUD Utility Schedule Model to derive our adjustments. The HUD model includes a current utility rate survey for the area. In the event that the tenant-paid utilities associated with a particular property are higher or lower than the subject, adjustments were made to account for the differences. Adjustments reflect the difference between the tenant-paid utilities for the comparable property minus that for the subject.

Technology

We accounted for technology (cable and internet access) offered in the rent for each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$0 per month for cable; internet access was valued at \$0.

Technology										
Adjustment	Survey	Range	Concluded							
Cable	\$0	\$50	\$0							
Internet	\$0	\$50	\$0							

Bedrooms

Our analysis also included an adjustment for the number of bedrooms at each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$85 per bedroom.

Bedrooms									
Adjustment	Surve	y Range	Concluded						
Bedrooms	\$0	\$200	\$85						

Bathrooms

Our analysis also included an adjustment for the number of bathrooms at each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$0 per bathroom.

Bathrooms				
Adjustment	Survey	/ Range	Concluded	
Bathrooms	\$0	\$100	\$0	

Square Feet

Our analysis also included an adjustment for square footage at each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$0.00 per square foot.

Square Feet				
Adjustment	Survey	Range	Concluded	
Square Feet	\$0.00	\$2.00	\$0.00	

Visibility

We also accounted for differences in visibility at each of the comparables as compared to the subject property in our analysis. Based on our field review, we assigned a visibility rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$0 per point for differences in visibility ratings between the subject and the comparables.

	Vis	ibility	
Adjustment	Survey Range Concluded		
Rating	\$0	\$100	\$0

Access

Our analysis also included an adjustment for access at each of the comparables as compared to the subject property. Based on our field review, we assigned an access rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$0 per point for differences in access ratings between the subject and the comparables.

	Ac	cess	
Adjustment	Survey	/ Range	Concluded
Rating	\$0	\$100	\$0

Neighborhood

We considered differences in neighborhood at each of the comparables as compared to the subject property in our analysis. Based on our field review and our evaluation of local demographic and crime data (presented earlier in this report), we assigned a neighborhood rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$65 per point for differences in neighborhood ratings between the subject and the comparables.

Neighborhood				
Adjustment	Survey	/ Range	Concluded	
Rating	\$0	\$100	\$65	

Area Amenities

We also accounted for area amenities for each of the comparables as compared to the subject property in our analysis. Based on our field review and our evaluation of local amenity data (presented earlier in this report), we assigned a local amenity rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$80 per point for differences in amenity ratings between the subject and the comparables.

Area Amenities				
Adjustment	Surve	y Range	Concluded	
Rating	\$0	\$100	\$80	

Median Household Income

Our analysis also included an adjustment for median household income for the area in which each of the comparables is located as compared to the subject property. Statistical extraction resulted in an adjustment of \$0.0000 per dollar of median household income.

Median Household Income				
Adjustment Survey Range Concluded				
Med HH Inc	\$0.0000	\$0.0000	\$0.0000	

Average Commute

Our analysis also included an adjustment for average commute for the area in which each of the comparables is located as compared to the subject property. Statistical extraction resulted in an adjustment of \$0.00 per each minute of commute.

Average Commute				
Adjustment	Survey Range Concluded			
Avg Commute	\$0.00	\$0.00	\$0.00	

Public Transportation

Our analysis also included an adjustment for the existence of public transportation within walking distance of each of the comparables as compared to the subject property. Statistical extraction resulted in an adjustment of \$0.00 for public transportation.

Public Transportation				
Adjustment Survey Range Concluded				
Public Trans	\$0.00	\$0.00	\$0.00	

Personal Crime

Our analysis also included an adjustment for personal crime rates for the area in which each of the comparables is located as compared to the subject property. Statistical extraction resulted in an adjustment of \$0 per 0.01 percentage points.

Personal Crime				
Adjustment Survey Range Concluded				
Personal Crime	\$0	\$0	\$0	

Condition

Our analysis also included an adjustment for the condition of each comparable as compared to the subject property. Based on our field review, we assigned a condition rating for each of the properties included in this analysis. Our ratings ranged from 1 to 5 with 1 being the worst and 5 being the best. Statistical extraction resulted in an adjustment of \$10 per point for differences in condition ratings between the subject and the comparables.

Condition				
Adjustment Survey Range Concluded				
Rating	\$10	\$50	\$10	

Effective Age

We considered differences in effective age in our analysis. Based on our field review, we estimated the effective age for each of the properties included in this analysis. Our estimates reflected the condition-adjusted age and remaining useful life of each property. Statistical extraction resulted in an adjustment of \$1.00 per year for differences in effective age between the subject and the comparables.

Effective Age				
Adjustment	Survey	Concluded		
Rating	\$1.00	\$5.00	\$1.00	

Project Amenities

We considered the presence of various project amenities at the comparables as compared to the subject property. Project amenities include ball fields, BBQ areas, billiards, business/computer centers, car care centers, community centers, elevators, fitness centers, gazebos, hot tubs/Jacuzzis, horseshoe pits, lakes, libraries, movie theatres, picnic areas, playgrounds, pools, saunas, sports courts and walking trails. The survey range and our concluded adjustment for each amenity is summarized below.

Project Amenities			
Adjustment	Survey Range		Concluded
Ball Field	\$2	\$10	\$2
BBQ Area	\$2	\$10	\$10
Billiards	\$2	\$10	\$2
Bus/Comp Ctrs	\$2	\$10	\$10
Car Care Center	\$2	\$10	\$2
Community Center	\$2	\$10	\$10
Elevator	\$10	\$100	\$10
Fitness Center	\$2	\$10	\$10
Gazebo	\$2	\$10	\$10
Hot Tub/Jacuzzi	\$2	\$10	\$2
Horseshoe Pit	\$2	\$10	\$2
Lake	\$2	\$10	\$2
Library	\$2	\$10	\$2
Movie Theatre	\$2	\$10	\$2
Picnic Area	\$2	\$10	\$10
Playground	\$2	\$10	\$10
Pool	\$2	\$10	\$2
Sauna	\$2	\$10	\$2
Sports Court	\$2	\$10	\$2
Walking Trail	\$2	\$10	\$10

Unit Amenities

We considered the presence of various unit amenities at the comparables as compared to the subject property. Unit amenities include blinds, ceiling fans, carpeting/upgraded flooring, fireplaces, patios/balconies and storage. The survey range and our concluded adjustment for each amenity is summarized below.

Unit Amenities				
Adjustment	Survey Range		Concluded	
Blinds	\$2	\$10	\$2	
Ceiling Fans	\$2	\$10	\$10	
Carpeting	\$2	\$10	\$2	
Fireplace	\$2	\$10	\$2	
Patio/Balcony	\$2	\$10	\$10	
Storage	\$10	\$50	\$10	

Kitchen Amenities

We considered the presence of various kitchen amenities at the comparables as compared to the subject property. Kitchen amenities include stoves, refrigerators, disposals, dishwashers and microwaves. The survey range and our concluded adjustment for each amenity is summarized below.

Kitchen Amenities				
Adjustment	Survey Range		Concluded	
Stove	\$2	\$10	\$2	
Refrigerator	\$2	\$10	\$2	
Disposal	\$2	\$10	\$2	
Dishwasher	\$2	\$10	\$2	
Microwave	\$2	\$10	\$2	

Parking

We also adjusted for differing types of parking configurations. We classified parking five ways: (1) Garage, (2) Covered; (3) Assigned, (4) Open and (5) No parking offered. Statistical extraction resulted in an adjustment of \$50 per month for garages; covered parking was valued at \$20; assigned parking was valued at \$10; open parking was valued at \$0; no parking was valued at \$0.

Parking				
Adjustment	Survey Range		Concluded	
Garage	\$50	\$200	\$50	
Covered	\$20	\$100	\$20	
Assigned	\$10	\$50	\$10	
Open	\$0	\$0	\$0	
None	\$0	\$0	\$0	

Laundry

We also evaluated differing types of laundry configurations. We classified laundry amenities three ways: (1) Central Laundry, (2) Washer/Dryer Units; and (3) Washer/Dryer Hookups. Our analysis resulted in an adjustment of \$25 per month for central laundries; washer/dryer units were valued at \$10; washer/dryer hookups were valued at \$25.

Laundry			
Adjustment	Survey Range		Concluded
Central	\$5	\$25	\$25
W/D Units	\$10	\$50	\$10
W/D Hookups	\$5	\$25	\$25

Security

We considered the presence of various security amenities at the comparables as compared to the subject property. Security amenities include call buttons, controlled access, courtesy officers, monitoring, security alarms and security patrols. The survey range and our concluded adjustment for each amenity is summarized below.

Security				
Adjustment	Survey Range		Concluded	
Call Buttons	\$2	\$10	\$10	
Controlled Access	\$2	\$10	\$2	
Courtesy Officer	\$2	\$10	\$2	
Monitoring	\$2	\$10	\$10	
Security Alarms	\$2	\$10	\$2	
Security Patrols	\$2	\$10	\$2	

Rent Conclusion, 3BR-2BA-1103sf

The development of our rent conclusion for the 3BR-2BA-1103sf units is found below.

Our analysis included the evaluation of a total of 8 unit types found at 5 properties. We selected the 8 most comparable units to utilize as rent comparables for purposes of this analysis. A write-up for each of the properties included in this analysis is found in the Appendix.

Our analysis included the adjustments developed in the previous section. Adjustments represent dollar amounts by which the subject property varies from the comparable properties. If the subject is better, a "plus" adjustment is made. If the subject is inferior, a "minus" adjustment is made. In the table below, we summarize the adjustments and the resulting indicated rent for the top 8 comparables included in this analysis. The units that we consider most comparable are highlighted for the reader's reference.

		Rent C	Conclusion

						-			

Adjusted Rent, Minimum	\$465
Adjusted Rent, Maximum	\$506
Adjusted Rent, Average	\$490
Adjusted Rent, Modified Average	\$492
Rent, Concluded	\$500

Our analysis suggests a rent of \$500 for the 3BR-2BA-1103sf units at the subject property.

In our opinion, the 3BR-2.5BA-1385sf units at Sweetbriar 1 (Property # 061), the 2BR-1.5BA-1010sf units at Whites Mill Point Apartments (Property # 074), the 3BR-2BA-1304sf units at Harbor Landing Apartments (Property # 028), the 3BR-2BA-1173sf units at Ridgecrest Town Apartments (Property # 049), and the 2BR-1BA-985sf units at Sapling Grove Apartments (Property # 054) are the best comparables for the units at the subject property.

Rent Conclusion, 3BR-2BA-961sf

The development of our rent conclusion for the 3BR-2BA-961sf units is found below.

Our analysis included the evaluation of a total of 8 unit types found at 5 properties. We selected the 8 most comparable units to utilize as rent comparables for purposes of this analysis. A write-up for each of the properties included in this analysis is found in the Appendix.

Our analysis included the adjustments developed in the previous section. Adjustments represent dollar amounts by which the subject property varies from the comparable properties. If the subject is better, a "plus" adjustment is made. If the subject is inferior, a "minus" adjustment is made. In the table below, we summarize the adjustments and the resulting indicated rent for the top 8 comparables included in this analysis. The units that we consider most comparable are highlighted for the reader's reference.

Adjusted Rent, Minimum	\$465
Adjusted Rent, Maximum	\$506
Adjusted Rent, Average	\$490
Adjusted Rent, Modified Average	\$492
Rent, Concluded	\$500

Our analysis suggests a rent of \$500 for the 3BR-2BA-961sf units at the subject property.

In our opinion, the 3BR-2.5BA-1385sf units at Sweetbriar 1 (Property # 061), the 2BR-1.5BA-1010sf units at Whites Mill Point Apartments (Property # 074), the 3BR-2BA-1304sf units at Harbor Landing Apartments (Property # 028), the 3BR-2BA-1173sf units at Ridgecrest Town Apartments (Property # 049), and the 2BR-1BA-985sf units at Sapling Grove Apartments (Property # 054) are the best comparables for the units at the subject property.

Restricted Market Rent Conclusion

Based on our evaluation of the rents at the select comparable properties, and considering the location, quality and amenities of the subject property, we conclude the following market rents for the subject property units, assuming that the subject were a restricted property:

Restri	cted Market Rent C	Conclusion		
Unit Type / Income Limit / Rent Limit	HOME	Subsidized	Units	Market
3BR-2BA-1103sf / 60% of AMI / 40% of AMI	no	No	3	\$500
3BR-2BA-1103sf / 60% of AMI / 50% of AMI	no	No	3	\$500
3BR-2BA-961sf / 60% of AMI / 50% of AMI	no	No	5	\$500
3BR-2BA-961sf / 60% of AMI / 60% of AMI	no	No	3	\$500
3BR-2BA-1090sf / 60% of AMI / 60% of AMI	no	No	8	\$500
Total / Average			22	\$500

Our analysis suggests an average restricted market rent of \$500 for the subject property.

We selected a total of 5 properties as comparables for purposes of our analysis. The average occupancy at the select rent comparables currently stands at 85 percent.

The occupancy rate of the selected rent compatrables is broken out in the tables below:

	Occupancy Rate, Select Comparables										
	Subsidized	20% of AMI	30% of AMI	40% of AMI	50% of AMI	60% of AMI	80% of AMI	Market			
0-Bedroom											
1-Bedroom											
2-Bedroom	100%			100%	94%						
3-Bedroom				96%	69%						
4-Bedroom											
Total	100%			98%	85%						

Occupancy rates for all stabilized market area properties are broken out below:

			Occupanc	y Rate, Stabilized	Properties			
	Subsidized	20% of AMI	30% of AMI	40% of AMI	50% of AMI	60% of AMI	80% of AMI	Market
0-Bedroom								67%
1-Bedroom	99%			100%	95%		91%	97%
2-Bedroom	99%			94%	95%		73%	94%
3-Bedroom	100%			94%	75%			97%
4-Bedroom	100%							
Total	99%			96%	90%		79%	95%

Rents at rent restricted properties tend to move with median household incomes for an area. Given HUD's published median incomes, we were able to derive 1, 2 and 3-bedroom 60% of AMI rent limits for the subject's primary market area. According to our analysis, maximum 2-bedroom rents for the area grew from \$667 to \$744 since 2010. This represents an average 1.3% annual increase over this period.

Manimum tan and it must date for the sure is formal holes.	
Maximum tax credit rent data for the area is found below:	

		Rent			Change					
Year	1BR	2BR	3BR	1BR	2BR	3BR

Achievable Rent Conclusion

The next step in our analysis is to develop an achievable rent conclusion for the subject property. Achievable rents represent the absolute highest rent permissible for the area, considering market rents, program rent limits, and any other applicable rent restrictions on the subject property.

Our analysis begins by establishing the applicable program rent limits for the subject property. Program rent limits include any applicable LIHTC and FMR rent limits. LIHTC rent limits typically apply to units benefitting from tax credit and/or bond financing. The LIHTC rent limits for applicable units at the subject property follow:

LIHTC Rent Limits											
Unit Type / Income Limit / Rent Limit	HOME	Subsidized	Units	Gross Rent	Utilities	Net Rent					
3BR-2BA-1103sf / 60% of AMI / 40% of AMI	no	No	3	\$630	\$226	\$404					
3BR-2BA-1103sf / 60% of AMI / 50% of AMI	no	No	3	\$787	\$226	\$561					
3BR-2BA-961sf / 60% of AMI / 50% of AMI	no	No	5	\$787	\$226	\$561					
3BR-2BA-961sf / 60% of AMI / 60% of AMI	no	No	3	\$945	\$226	\$719					
3BR-2BA-1090sf / 60% of AMI / 60% of AMI	no	No	8	\$945	\$226	\$719					
Total / Average			22	\$845	\$226	\$619					

Our analysis suggests an average net LIHTC rent limit of \$619 for 22 applicable units at the subject property.

FMR rent limits typically apply to units benefitting from HOME funds. The FMR rent limits for applicable units at the subject property follow:

FMR Rent Limits												
Unit Type / Income Limit / Rent Limit	HOME	Subsidized	Units	Gross Rent	Utilities	Net Rent						
3BR-2BA-1103sf / 60% of AMI / 40% of AMI	no	No	-	-	-	-						
3BR-2BA-1103sf / 60% of AMI / 50% of AMI	no	No	-	-	-	-						
3BR-2BA-961sf / 60% of AMI / 50% of AMI	no	No	-	-	-	-						
3BR-2BA-961sf / 60% of AMI / 60% of AMI	no	No	-	-	-	-						
3BR-2BA-1090sf / 60% of AMI / 60% of AMI	no	No	-	-	-	-						
Total / Average			-	-	-	-						

HOME funding is not proposed for the subject property.

Units benefitting exclusively from tax credits and/or bond financing are subject to LIHTC rent limits. Units benefitting from HOME funds in addition to tax credit and/or bond financing are subject to the lesser of LIHTC rent limits or FMR rent limits. Units benefitting from project-based rental assistance are normally limited to unrestricted market rent. With these parameters in mind, the following table sets forth the concluded program rent limits for applicable units at the subject property:

Program Rent Limits											
Unit Type / Income Limit / Rent Limit	HOME	Subsidized	Units	LIHTC	FMR	Market	Program				
3BR-2BA-1103sf / 60% of AMI / 40% of AMI	no	No	3	\$404	-	-	\$404				
3BR-2BA-1103sf / 60% of AMI / 50% of AMI	no	No	3	\$561	-	-	\$561				
3BR-2BA-961sf / 60% of AMI / 50% of AMI	no	No	5	\$561	-	-	\$561				
3BR-2BA-961sf / 60% of AMI / 60% of AMI	no	No	3	\$719	-	-	\$719				
3BR-2BA-1090sf / 60% of AMI / 60% of AMI	no	No	8	\$719	-	-	\$719				
Total / Average			22	\$619	-	-	\$619				

Our analysis suggests an average program rent limit of \$619 for 22 applicable units at the subject property.

Now that we have established program rent limits, we are in a position to develop an achievable rent conclusion for the subject property. Achievable rents represent the absolute highest rent permissible for the area, considering unrestricted and restricted market rents, program rent limits, and any other applicable rent restrictions on the subject property. The following table summarizes our findings:

Achievable Rents											
Unit Type / Income Limit / Rent Limit	HOME	Subsidized	Units	Program	Unrestricted	Restricted	Achievable	Proposed	Advantage		
3BR-2BA-1103sf / 60% of AMI / 40% of AMI	no	No	3	\$404	\$745	\$500	\$404	\$389	3.7%		
3BR-2BA-1103sf / 60% of AMI / 50% of AMI	no	No	3	\$561	\$745	\$500	\$500	\$500	0.0%		
3BR-2BA-961sf / 60% of AMI / 50% of AMI	no	No	5	\$561	\$725	\$500	\$500	\$500	0.0%		
3BR-2BA-961sf / 60% of AMI / 60% of AMI	no	No	3	\$719	\$725	\$500	\$500	\$500	0.0%		
3BR-2BA-1090sf / 60% of AMI / 60% of AMI	no	No	8	\$719	\$735	\$500	\$500	\$500	0.0%		
Total / Average			22	\$619	\$734	\$500	\$487	\$485	0.4%		

Our analysis suggests an average achievable rent of \$487 for the subject property. This is compared with an average proposed rent of \$485, yielding an achievable rent advantage of 0.4 percent. Overall, the subject property appears to be priced at or below achievable rents for the area.

DEMAND ANALYSIS

Overview

In this section we evaluate demand for the subject property using the recommended demand methodology promulgated by the National Council of Housing Market Analysts (NCHMA). For purposes of this analysis, we define demand as the number of income-qualified renter households (by household size and unit type) that would qualify to live at the subject property at the lesser of the developer's proposed rents or achievable rents.

Our analysis begins by developing a breakdown of the number of renter households, by income, by size as of the date of market entry for this development. This breakdown, which utilizes demographic data presented earlier in this report, is presented below:

			Re	nter Househo	olds, by Incom	e, by Size			
	2020	\$				2021			
Min		Max	1 Person	2 Person	3 Person	4 Person	5 Person	6+ Person	Total
\$0	to	\$9,999	754	239	120	38	9	2	1,163
\$0	to	\$19,999	1,715	633	267	80	22	4	2,720
\$0	to	\$29,999	2,345	1,029	408	183	92	33	4,091
\$0	to	\$39,999	2,733	1,230	552	263	149	62	4,989
\$0	to	\$49,999	2,946	1,435	821	310	170	66	5,747
\$0	to	\$59,999	3,040	1,526	880	418	235	91	6,190
\$0	to	\$74,999	3,201	1,685	914	452	261	98	6,612
\$0	to	\$99,999	3,229	1,850	967	574	309	119	7,048
\$0	to	\$124,999	3,311	1,963	972	617	319	120	7,302
\$0	to	\$149,999	3,381	2,020	995	641	326	120	7,482
\$0	to	\$199,999	3,449	2,055	1,001	652	333	122	7,613
\$0	or	more	3,485	2,086	1,012	665	344	122	7,713

Source: ESRI & Ribbon Demographics

Our analysis includes an estimate of demand along with capture rate and penetration rate estimates. Capture rates were computed two ways: (1) On a <u>gross</u> basis (the number of proposed units divided by qualified demand) and (2) On a <u>net</u> basis (the number of proposed units divided by qualified demand minus competing & pipeline units). Penetration rates are defined as the number of proposed units plus competing & pipeline units divided by incomequalified demand. In the following pages we provide detailed listings of competing & pipeline units in the market area broken by unit type.

Demand Estimate, 3-Bedroom, Restricted, 60% of AMI

In this section we estimate demand for the 3-Bedroom / Restricted / 60% of AMI units at the subject property. Our analysis assumes a total of 22 units, 22 of which are anticipated to be vacant on market entry in 2021. Our analysis assumes a 35% income qualification ratio and 5-person households.

Unit Details									
Target Population	Family Households								
Unit Type	3-Bedroom								
Rent Type	Restricted								
Income Limit	60% of AMI								
Total Units	22								
Vacant Units at Market Entry	22								
Minimum Qualified Income									
Net Rent	\$500

	Demand Es	timate		518		

Our analysis suggests demand for a total of 518 size- and income-qualified units in the market area.

Please note: This unit-level demand estimate does not account for income band overlap with other units. Project-level demand estimates taking these factors into consideration will be developed later.

Demand Estimate, Restricted, 60% of AMI

In this section we account for income-band overlap and develop a demand estimate for the units restricted to 60% of AMI at the subject property.

Our analysis suggests project-level demand for a total of 518 size- and income-qualified units in the market area.

Capture Rates

In this section, we summarize our demand conclusions and estimate the capture rate for the subject property. Our analysis begins by summarizing the estimated number of vacant subject property units on the date of market entry.

			Su	ibject Prope	rty Units (To	tal)			
	Sub	30%	40%	50%	60%	70%	80%	Mkt	Tot
0BR									
1BR									
2BR									
3BR					22				22
4BR									
Tot					22				22

			Subject Pro	perty Units ((Vacant at N	larket Entry)			
	Sub	30%	40%	50%	60%	70%	80%	Mkt	Tot
0BR									
1BR									
2BR									
3BR					22				22
4BR									
Tot					22				22

The next step in our analysis is to summarize the demand conclusions derived previously. For purposes of this analysis, we define demand as age- and income- qualified renter households for each of the unit types proposed at the subject property. Unit-level demand estimates are found in the body of the chart found below; project-level demand estimates are found in the column and row totals.

Please note: Because of income-band overlap, unit-level demand may not add up to project-level demand. The overlap, which was quantified in the demand estimates presented earlier, has been accounted for in our estimates of project-level demand.

				Gross I	Demand				
	Sub	30%	40%	50%	60%	70%	80%	Mkt	Tot
0BR									
1BR									
2BR									
3BR					518				518
4BR									
Tot					518				518

The next step in our analysis is to compute the capture rate for the project. For purposes of this computation, we define capture rate as the number of subject property units divided by gross demand. Underwriters often utilize capture rate limits of 10 to 25 percent using this methodology. Our estimates are presented below:

		Oup	tale Rates (oubject i io	porty Office /	Closs Delli	unu)		
	Sub	30%	40%	50%	60%	70%	80%	Mkt	Tot
0BR									
1BR									
2BR									
3BR					4.2%				4.2%
4BR									
Tot					4.2%				4.2%

Capture Rates (Subject Property Units / Gross Demand)

The next step in our analysis is to tabulate the number of vacant competing & pipeline units in the market area by

unit/income type. This information will be used to further refine our capture rate estimate for the subject property. A table showing the distribution of vacant competing & pipeline units is found below.

			vaca	nt Competin	g & Pipeline	Units			
	Sub	30%	40%	50%	60%	70%	80%	Mkt	Tot
0BR									
1BR									
2BR									
3BR					13				13
4BR									
Tot					13				13

Vacant Competing & Pipeline Units

The next step in our analysis is to subtract the number of vacant competing & pipeline units from gross demand to arrive at a net demand estimate for the subject property units. As described earlier, unit-level net demand estimates are found in the body of the chart found below; project-level net demand estimates are found in the column and row totals.

Please note: Because of income-band overlap, unit-level net demand may not add up to project-level net demand. The overlap, which was quantified in the demand estimates presented earlier, has been accounted for in our estimates of project-level net demand.

		Net Dema	anu (Giuss L	Jemanu - va	acant comp	enny & ripe			
	Sub	30%	40%	50%	60%	70%	80%	Mkt	Tot
0BR									
1BR									
2BR

4BR									
Tot					505				505
3BR 4BR									

Not Domand (Gross Demand -	 Vacant Competing 8 	. Pinalina I Inite)
Not Domana (Oloss Demana	vacant competing e	

The next step in our analysis is to compute the capture rate for the project. For purposes of this computation, we define capture rate as the number of subject property units divided by net demand. A capture rate in excess of 20 percent is considered excessive using this methodology. Our estimates are presented below:

	Sub	30%	40%	50%	60%	70%	80%	Mkt	Tot
0BR									
1BR									
2BR									
3BR					4.4%				4.4%
4BR									
Tot					4.4%				4.4%

Capture Rates	(Subject Property	y Units / Net Demand)
ouplaid Haloo		y onno / not bonnana)

In our opinion, the estimated project-level capture rate suggests an appropriate number of units for the subject property. The unit level capture rates suggest an appropriate mix of units for the subject property.

Penetration Rates

In this section, we summarize our demand conclusions and estimate the penetration rate for the subject property. Our analysis begins by summarizing the estimated number of vacant subject property units on the date of market entry.

			Su	bject Proper	rty Units (To	tal)			
	Sub	30%	40%	50%	60%	70%	80%	Mkt	Tot
0BR									
1BR

Tot					76				76

Inclusive Supply (Subject Property Units + Competing & Pipeline Units)

The next step in our analysis is to compute the penetration rate for the project. For purposes of this computation, penetration rate is defined as inclusive supply divided by gross demand. A penetration rate in excess of 100 percent is considered excessive using this methodology. Our estimates are presented below:

	Sub	30%	40%	50%	60%	70%	80%	Mkt	Tot			
0BR												
1BR												
2BR												
3BR					14.7%				14.7%			
4BR												
Tot					14.7%				14.7%			

Penetration Rates (Inclusive Supply / Gross Demand)

In our opinion, the estimated project-level penetration rate suggest an appropriate number of units for the subject property. The unit-level penetration rates suggest an appropriate mix of units for the subject property.

Absorption Period

In this section, we estimate the absorption period for the subject property. Our analysis begins by summarizing the estimated number of vacant subject property units on the date of market entry.

			Subjec	t Property Unit	s (Total)			
	Sub	30%	40%	50%	60%	70%	80%	Mkt
0BR								
1BR								
2BR								
3BR					22			
4BR								
-		-		-	-		-	
		Su	bject Property	y Units (Vacan	t at Market Entr	ry)		

	Sub	30%	40%	50%	60%	70%	80%	Mkt
0BR	000	0070	1070	0070	0070		0070	
1BR								
2BR								
3BR					22			
4BR								

The next step in our analysis is to summarize the demand conclusions derived previously. For purposes of this analysis, we define demand as age- and income- qualified renter households for each of the unit types proposed at the subject property. Our analysis uses the unit-level demand estimates derived previously.

				Gross Deman	d			
	Sub	30%	40%	50%	60%	70%	80%	Mkt
0BR								
1BR								
2BR								
3BR					518			
4BR								

The next step in our analysis is to apply an annual growth & movership rate to derive an annual rental household growth & movership estimate for the market area. Our estimates are found in the tables below.

Annual Growth & Movership Rate						
Growth	0.0%					
Movership	29.2%					
Total	29.3%					

Growth & Movership Estimate

	Sub	30%	40%	50%	60%	70%	80%	Mkt
0BR								
1BR								
2BR								
3BR					152			
4BR								

The next step in our analysis is to account for secondary market area migration in our annual rental household growth & movership estimate for the market area. Our estimates are found in the tables below.

Secondary Market Area 20%

	Sub	30%	40%	50%	60%	70%	80%	Mkt
0BR	000	0070	1070	0070	0070	1070	0070	
1BR								
2BR								
3BR					190			
4BR								

The next step in our analysis is to estimate fair share, or the proportion of growth and movership that we would expect the subject property to capture. The fair share analysis is used extensively in single-family, multifamily, commercial, and retail market studies. The books entitled <u>Market Analysis for Valuation Appraisals</u> (1994, Appraisal Institute) and <u>Market Analysis and Highest & Best Use</u> (2005, Appraisal institute) provide a good overview of this technique and its application to a variety of property types.

Based on our review of the subject and competing properties, along with their relative conditions/locations, we arrive at the following fair share estimates for the various unit/income types at the subject property.

Competing Properties									
	Sub	30%	40%	50%	60%	70%	80%	Mkt	
0BR								4	
1BR	5			1	4		1	14	
2BR	7			3	7		1	22	
3BR	5			3	5			4	
4BR	2								

Fair Share										
	Sub	30%	40%	50%	60%	70%	80%	Mkt		
0BR										
1BR										
2BR										
3BR					40.0%					
4BR										

Applying the concluded fair share estimates to annual growth & movership and dividing by twelve yields the following monthly absorption rate estimates for the various unit/income types at the subject property.

	Monally Absorption Rate Estimate							
	Sub	30%	40%	50%	60%	70%	80%	Mkt
0BR								
1BR								
2BR								
3BR					6.3			
4BR								

The next step in our analysis is to estimate stabilized occupancy by unit/income type for the subject property. These estimates, which were based on data previously presented in the supply analysis and rent comparability analysis sections of this report, are found below.

	Rental Property Inventory, Confirmed, Inside Market Area, Pamily, Stabilized Occupancy								
	Sub	30%	40%	50%	60%	70%	80%	Mkt	
0BR								67%	
1BR	98%			100%	89%		91%	97%	
2BR	99%			94%	95%		73%	94%	
3BR	100%			94%	75%			97%	
4BR	100%

3BR				96%	69%			97%			
4BR											

Concluded Stabilized Occupancy Rate

	Sub	30%	40%	50%	60%	70%	80%	Mkt
0BR								
1BR								
2BR								
3BR					95%			
4BR								

Applying the stabilized occupancy rate estimates to the number of vacant subject property units at market entry, yields the number of occupied units by unit/income type at stabilization as set forth below.

Occupied Units at Stabilization

	Sub	30%	40%	50%	60%	70%	80%	Mkt
0BR								
1BR								
2BR								
3BR					21			
4BR								

Dividing the number of occupied units at stabilization by the monthly absorption rate yields an absorption period estimate by unit/income type for the various units at the subject property. Underwriters often utilize absorption period limits of 12 to 18 months for projects similar to the subject property. Our absorption period estimates are found below.

	Absolution rende (Month's to Stabilization)									
	Sub	30%	40%	50%	60%	70%	80%	Mkt		
0BR										
1BR										
2BR										
3BR					3					
4BR										

Absorption Period (Months to Stabilization)

Our analysis suggests that the subject property will stabilize at 95 percent occupancy. We estimate 3 months of absorption and an average absorption rate of 6.3 units per month for this project. In our opinion, the absorption period suggests an appropriate number and mix of units for the subject property.

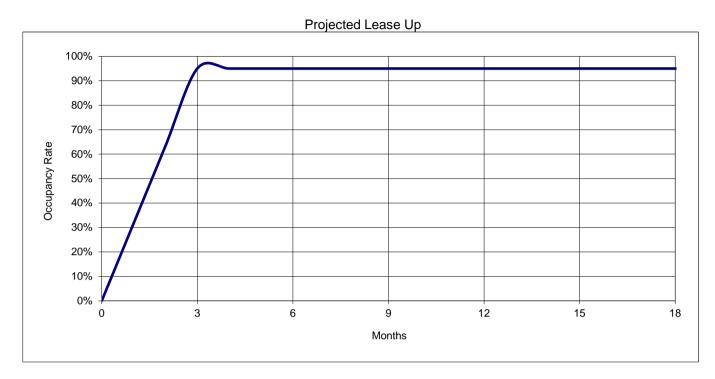

Absorption rates for multifamily properties depend on a variety of factors: (1) The competitive environment in which the property resides; (2) The pricing of the subject property units relative to competing units, (3) The presence of rent or income restrictions at the subject property; and (4) The availability of any rent concessions or rental assistance at the subject property. Subsidized properties normally lease up at a rate of 15-20 units per month. Unsubsidized properties with rent and income restrictions tyically fill at a rate of 5-10 units per month. Market rate properties normally lease up at a rate of 10-15 units per month.

As part of our analysis, we inquired about the absorption history for every property we surveyed. The following list summarizes our findings:

Key	Project	Built	Renovated	Rent Type	Осс Туре	Tot Units	Ab Rte
029	Highland View Apartments	1983	2013	Restricted	Family	44	44.0
049	Ridgecrest Town Apartments	2008	na	Restricted	Family	72	62.0
052	Riverside Place Apartments	1923	2011	Restricted	Family	22	3.8
054	Sapling Grove Apartments	2008	na	Restricted	Family	26	26.0
061	Sweetbriar 1	2009	na	Restricted	Family	20	20.0
074	Whites Mill Point Apartments	2006	na	Restricted	Family	32	32.0

Absorption Analysis

In this section, we analyze the anticipated lease up for the subject property. We begin our analysis by taking the the absorption period conclusions from the previous section and restating them graphically as illustrated below.

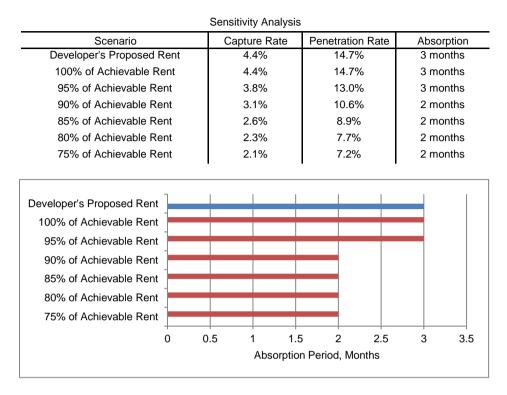

Our analysis suggests that the subject property will achieve 70 percent occupancy in 2 months, 80 percent occupancy in 2 months, and 90 percent occupancy in 2 months. We anticipate that the subject property will stabilize at 95 percent occupancy in 3 months.

It is important to note that this analysis does not account for pent-up demand, pre-leasing efforts or rent concessions. In our opinion, an effective pre-leasing effort could result in a month-for-month reduction in the estimated absorption period for this project. In addition, any concessions or rent subsidies not accounted for already in this analysis could cut capture rates and absorption periods significantly.

Sensitivity Analysis

We also explored the relationship between rent level, capture rates, penetration rates, and absorption period. For purposes of this analysis, we forecasted demand and fill rates at 75%, 80%, 85%, 90%, 95% and 100% of achievable rent (derived earlier in this report). Our analysis is summarized below:

Our analysis suggests the following relationship between rent levels and fill rates: At the developer's proposed rent we anticipate a 3-month absorption period; at 100% of achievable rent we anticipate a 3-month absorption period; at 75% of achievable rent we anticipate a 2-month absorption period.

VHDA DEMAND ANALYSIS

Overview

In this section we evaluate demand for the subject property using the VHDA demand methodology. For purposes of this analysis, we define VHDA demand as the number of new income-qualified and existing income-qualified overburdened and substandard renter households that would qualify to live at the subject property at the lesser of achievable rents or the sponsor's proposed rents. Our analysis accounts for any rent subsidies for the subject property.

Our analysis begins by developing a breakdown of the number of renter households, by income, by size as of the date of market entry for this development. This breakdown, which utilizes demographic data presented earlier in this report, is presented below:

	2020	\$				2020			
Min		Max	1 Person	2 Person	3 Person	4 Person	5 Person	6+ Person	Total

Renter Households, by Income, by Size

Source: ESRI & Ribbon Demographics

Demand Estimate, 3-Bedroom, Restricted, 60% of AMI

In this section we estimate demand for the 3-Bedroom / Restricted / 60% of AMI units at the subject property. Our analysis assumes a total of 22 units, 22 of which are anticipated to be vacant on market entry in 2020. Our analysis assumes a 35% income qualification ratio and 5-person households.

Unit Details								
Target Population	Family Households

Our analysis suggests demand for a total of 518 size- and income-qualified units in the market area.

Please note: This demand estimate does not account for income band overlap at the project level. A demand estimate taking this into consideration will be developed later.

Demand Estimate

In this section, we derive our overburdened demand and capture rate estimates for the subject property. Our analysis, which begins with the income-qualified renter household estimates developed above, is found below.

	Income Qualified Renter Households									
_		Sub	30%	40%	50%	60%	70%	80%	Mkt	
	Tot					518				

The next step in our analysis is to account for 2 years of growth to estimate the demand stemming from new income qualified rental households. Our estimates are found below.

			Annual Rent	er Household	Growth Rate			
				0.0%				
		New Rental Households						
	Sub	30%	40%	50%	60%	70%	80%	Mkt
Tot					0			

The next step in our analysis is to estimate existing demand stemming from income-qualified overburdened renter households in this market area. Our estimates are found below.

Overburdened Renter Households

25.9%

			Existing Hous	eholds - Rent	Overburdened	l		
	Sub	30%	40%	50%	60%	70%	80%	Mkt
Tot					134			

The next step in our analysis is to estimate existing demand stemming from income-qualified substandard renter households in this market area. Our estimates are found below.

2.6%

			Existing H	ouseholds - Si	ubstandard			
	Sub	30%	40%	50%	60%	70%	80%	Mkt
Tot					13			

The next step in our analysis is to account for elderly homeowners likely to convert to rental housing. This component may not comprise more than 20 percent of total demand. Our estimates are found below.

Elderly Homeowners Likely to Convert to Rental Housing

		,		,		U		
	Sub	30%	40%	50%	60%	70%	80%	Mkt
Tot								

The next step in our analysis is to account for existing qualifying tenants likely to remain after renovation. Our estimates are found below.

	Subject Property Units (Total)										
	Sub	30%	40%	50%	60%	70%	80%	Mkt			
Tot					22						

			caamyning i ond		ternam anter re	eneraten		
	Sub	30%	40%	50%	60%	70%	80%	Mkt
Tot								

The next step in our analysis is to tally up total demand for the subject property. Our estimates are found below.

				Total Demand				
	Sub	30%	40%	50%	60%	70%	80%	Mkt
 Tot					148			

The next step in our analysis is to tabulate the number of vacant competing & pipeline units in the market area by unit/income type. This information will be used to further refine our capture rate estimate for the subject property. A table showing the distribution of vacant competing & pipeline units is found below.

_			Vacant Co	mpeting & Pip	eline Units			
	Sub	30%	40%	50%	60%	70%	80%	Mkt
Tot					13			

The next step in our analysis is to subtract the number of vacant competing & pipeline units from total demand to arrive at a net demand estimate for the subject property. Our estimates are found below.

Net Demand (Total Demand - Vacant Competing & Pipeline Units)

		Het Bernan	a (Total Bollia		sinpoing a ri			
	Sub	30%	40%	50%	60%	70%	80%	Mkt
Tot					135			

The next step in our analysis is to compute the capture rate for the project. For purposes of this computation, we define capture rate as the total number of subject property units divided by net demand. Underwriters often utilize capture rate limits of 10 to 20 percent using this methodology. Our estimates are presented below:

Capture Rates (Subject Property Units / Net Demand)

	Sub	30%	40%	50%	60%	70%	80%	Mkt
Tot					16.3%			

Our findings are summarized below.

Project-Wide Capture Rate - LIHTC Units	16.3%
Project-Wide Capture Rate - Market Units	
Project-Wide Capture Rate - All Units	16.3%
Project-Wide Absorption Period (Months)	3 months

Please note: Project-wide capture rate estimates do not account for income band overlap at the project level.

Whites Mill Point Apartments is an existing multifamily development located at 15365 Whites Mill Road in Abingdon, Virginia. The property, which consists of 32 apartment units, was originally constructed in 2006. This property is currently operated as a rent restricted property. The property currently stands at 97 percent occupancy.

STATEMENT OF ASSUMPTIONS & LIMITING CONDITIONS

- The title to the subject property is merchantable, and the property is free and clear of all liens and encumbrances, except as noted.
- No liability is assumed for matters legal in nature.
- Ownership and management are assumed to be in competent and responsible hands.
- No survey has been made by the appraiser. Dimensions are as supplied by others and are assumed to be correct.
- The report was prepared for the purpose so stated and should not be used for any other reason.
- All direct and indirect information supplied by the owner and their representatives concerning the subject property is assumed to be true and accurate.
- No responsibility is assumed for information supplied by others and such information is believed to be reliable and correct. This includes zoning and tax information provided by Municipal officials.
- The signatories shall not be required to give testimony or attend court or be at any governmental hearing with respect to the subject property unless prior arrangements have been made with the client.
- Disclosure of the contents of this report is governed by the By-Laws and Regulations of the Appraisal Institute.
- The legal description is assumed to be accurate.
- This report specifically assumes that there are no site, subsoil, or building contaminates present resulting from residual substances or construction materials, such as asbestos, radon gas, PCB, etc. Should any of these factors exist, the appraiser reserves the right to review these findings, review the value estimates, and change the estimates, if deemed necessary.
- The Americans with Disabilities Act (ADA) became effective January 26, 1992. We have not made a specific compliance survey and analysis of this property to determine whether or not it is in conformity with
- This analysis specifically assumes that the subject property is operated as described in this report.
- This analysis specifically assumes that the subject property is constructed/rehabilitated as described in this report.
- This analysis specifically assumes that the subject property is financed as described in this report.
- This analysis specifically assumes the timing set forth in this report.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions, and conclusions are limited only by the reported assumptions and limiting conditions and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report and no personal interest with respect to the parties involved.
- I have performed no services, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of the appraisal.
- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Uniform Standards of Professional Appraisal Practice.
- I made a personal inspection of the property that is the subject of this report.
- No one provided significant real property appraisal assistance to the person signing this certification. Debbie Rucker (Allen & Associates Consulting) assisted in compiling the data used in this report.
- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and Standards of Professional Appraisal Practice of the Appraisal Institute.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.
- As of the date of this report, I have completed the Standards and Ethics Education Requirements for Members of the Appraisal Institute.
- I am presently licensed in good standing as a Certified General Real Estate Appraiser in the states of Delaware, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia, allowing me to appraise all types of real estate.

Respectfully submitted: ALLEN & ASSOCIATES CONSULTING, INC.

Jeff Carroll

VHDA CERTIFICATION

I affirm the following:

1) I have made a physical inspection of the site and market area.

2) The appropriate information has been used in the comprehensive evaluation of the need and demand for the proposed rental units.

3) To the best of my knowledge the market can support the demand shown in this study. I understand that any misrepresentation in this statement may result in the denial of participation in the Low Income Housing Tax Credit Program in Virginia as administered by the VHDA.

4) Neither I nor anyone at my firm has any interest in the proposed development or a relationship with the ownership entity.

5) Neither I nor anyone at my firm nor anyone acting on behalf of my firm in connection with the preparation of this report has communicated to others that my firm is representing VHDA or in any way acting for, at the request of, or on behalf of VHDA.

6) Compensation for my services is not contingent upon this development receiving a LIHTC reservation or allocation.

March 9, 2020

Jeff Carroll

ALLEN & ASSOCIATES CONSULTING

Real Estate Advisory Services

QUALIFICATIONS

Allen & Associates Consulting is a real estate advisory firm specializing in affordable housing. Practice areas include low-income housing tax credits, tax-exempt bond transactions, HUD assisted and financed multifamily, USDA-RD assisted and financed properties, public housing, historic tax credits, conventional multifamily, and manufactured housing. Services include development consulting, rent comparability studies, market analysis, feasibility studies, appraisals, capital needs assessments, and utility studies.

Allen & Associates Consulting and its sister organization Allen & Associates Appraisal maintain offices in Charlotte, North Carolina and Detroit, Michigan, respectively. Allen & Associates is approved to provide its services throughout the United States.

The following is a listing of key personnel for Allen & Associates Consulting:

Jeffrey B. Carroll

Jeffrey B. Carroll is President of Allen & Associates Consulting. Since 2000, Mr. Carroll has completed over 3000 development consulting assignments in 46 states. Major projects include:

- *Market Feasibility* Completed market studies for 13 proposed tax credit apartment developments on behalf of the Georgia Department of Community Affairs. The portfolio included 5 family and 8 senior communities. Our analysis identified the 4 best deals for the housing finance agency to consider funding.
- *Valuation* Developed a disposition plan for a 30-property portfolio of apartments on behalf of a private owner. The 921-unit portfolio (located in MD, DE, PA and VA) was valued at \$23 million. Our client relied on our valuations and advice to maximize sales proceeds for the portfolio.
- *Capital Needs Assessments* Completed capital needs assessments for an 8property portfolio of RD-financed apartments on behalf of a private developer. The portfolio (located in FL) included 6 family and 2 senior communities. Our client utilized our assessments to develop a scope of work for the proposed acquisition and renovation of the 214-unit portfolio.
- *Utility Allowance Studies* Completed utility allowance studies for a portfolio of tax credit apartments on behalf of a large national owner/developer. The portfolio (located in CT, DC, IL, IN, MA, NC, OH, PA and VA) included 31 properties. Our client utilized our research to maximize rents and net operating income for the portfolio.
- *Underwriting* Conducted a financial review on behalf of a local housing authority for the proposed redevelopment of a vacant historic textile mill into loft apartments. Our client had been asked to issue \$4 million in tax-exempt bonds for

the \$15 million project. Our assistance in underwriting the transaction resulted in the green light for the development.

Mr. Carroll is a certified general appraiser, licensed to appraise real estate in the states of Delaware, Georgia, Maryland, North Carolina, South Carolina and Virginia. Mr. Carroll is also a designated member of the Appraisal Institute (MAI).

Mr. Carroll is a peer-reviewed member of the National Council of Housing Market Analysts, where he served on the Executive Committee and chaired the Data and Ethics Committees.

In addition, Mr. Carroll has also served as a market study reviewer for the Georgia and Michigan housing finance agencies.

Mr. Carroll has written articles on affordable housing, development, property management, market feasibility, and financial analysis for <u>Urban Land</u> magazine, <u>The</u> <u>Journal of Property Management, Community Management</u> magazine, <u>Merchandiser</u> magazine, <u>HousingThink</u>, and a publication of the Texas A&M Real Estate Research Center known as <u>Terra Grande</u>.

Mr. Carroll has conducted seminars on affordable housing, development, property management, market feasibility, and financial analysis for the American Planning Association, <u>Community Management</u> magazine, the Georgia Department of Community Affairs, the Manufactured Housing Institute, the National Association of State and Local Equity Funds, the Virginia Community Development Corporation, and the National Council of Affordable Housing Market Analysts.

Mr. Carroll is also an experienced developer and property manager. His experience includes the development of tax credit apartment communities, conventional market rate apartments, manufactured home communities, and single-family subdivisions. He has also managed a portfolio of apartment complexes and manufactured home communities.

The following is a summary of Mr. Carroll's relevant educational background:

Clemson University, Bachelor of Science Degree Major in Engineering	1002
Minor Concentration in Economics	1983
Harvard University, Master's Degree in Business Administration Major in General Management	
Minor Concentration in Economics and Real Estate	1988
Appraisal Institute Qualifying Education for Licensure Continuing Education for Licensure & MAI Designation	2001 2020
ASTM International	
Property Condition Assessments E2018.01	September 2006

The Institute for Professional and Executive Development Tax Credit Property Disposition	October 2007
National Council of Affordable Housing Market Analysts Semi-Annual Meeting & Continuing Education	2002 - 2014
U.S. Department of Housing and Urban Development Utility Allowance Guidebook MAP Training & Certification	September 2007 September 2007
USDA Rural Development Capital Needs Assessment Provider Training Accessibility Standards Training	September 2007 September 2007

Mr. Carroll, who was awarded a scholarship on the Clemson University varsity wrestling team, has served as an assistant coach for a local high school wrestling team. Mr. Carroll resides in Charlotte, North Carolina with his wife Becky and his two children, Luke and Brittany.

Debbie Rucker

Debbie Rucker is an analyst with Allen & Associates Consulting, coordinating market research for the company. Mrs. Rucker has worked on over 2000 assignments and has conducted over 40,000 rent surveys.

Mrs. Rucker was also responsible for compiling the database of detailed information on of every tax credit and tax-exempt bond transaction in Virginia, North Carolina, South Carolina, Georgia, Florida, and Texas since 1999.

The following is a summary of Mrs. Rucker's relevant educational background:

National Council of Affordable Housing Market Analysts			
Semi-Annual Meeting & Continuing Education	September 2005		
Semi-Annual Meeting & Continuing Education	October 2006		
Carolinas Council for Affordable Housing			
Spectrum C ³ P Certification	October 2008		

Mrs. Rucker is active in her church and helps run a local judo club. Mrs. Rucker is the mother of three and resides in Weddington, North Carolina.

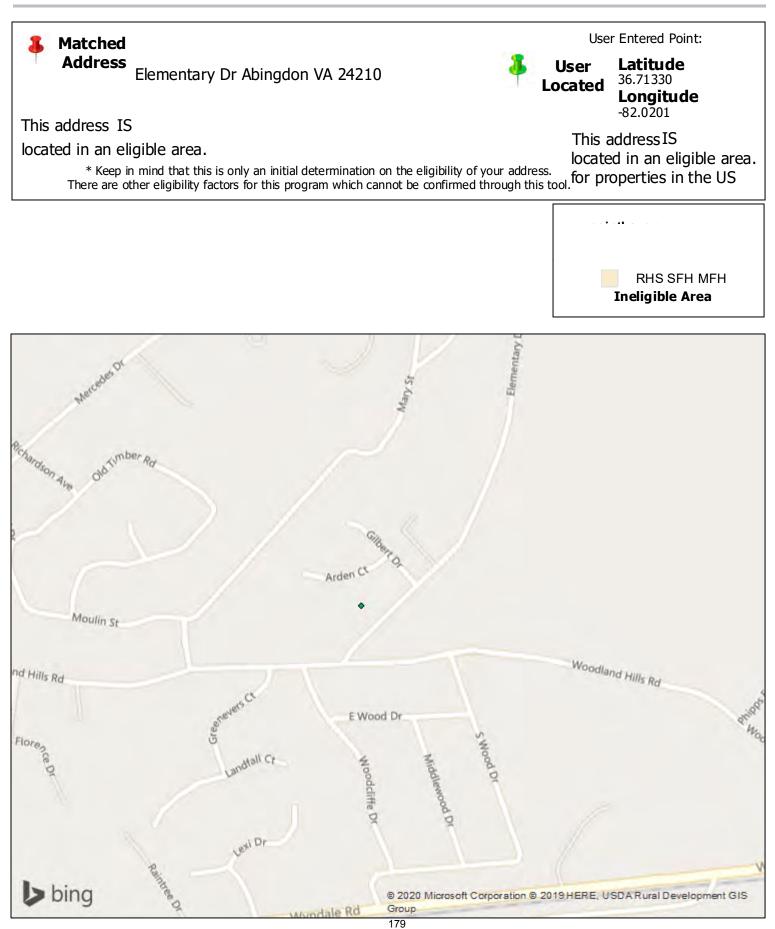

Michael W. Lash

Michael W. Lash is President of Lash Engineering, an engineering firm located in Charlotte, North Carolina that works closely with Allen & Associates Consulting on utility allowance studies and other specific engagements. Since 1981, Mr. Lash has completed hundreds of assignments including the design of industrial, commercial, multifamily, and single family developments. Mr. Lash is an expert in the design of utility systems, including wastewater and storm water treatment facilities. Mr. Lash is a certified professional engineer, licensed in the states of Kansas, Louisiana, North Carolina, South Carolina, and Virginia. Mr. Lash graduated from Louisiana Tech University in Civil Engineering in 1981 and has conducted seminars on advanced wastewater treatment, storm water quality treatment and automated engineering drafting and design with Eagle Point Software.

Mr. Lash is active in his church and volunteers his time teaching karate at a local martial arts academy. Mr. Lash resides in Charlotte, North Carolina with his wife and three children.

Washington County, VA is part of the Kingsport-Bristol-Bristol, TN-VA MSA, which consists of the following counties: Hawkins County, TN; Sullivan County, TN; Scott County, VA; Washington County, VA; and Bristol city, VA. All information here applies to the entirety of the Kingsport-Bristol-Bristol, TN-VA MSA.

Fair Market Rent Calculation Methodology

Show/Hide Methodology Narrative

Fair Market Rents for metropolitan areas and non-metropolitan FMR areas are developed as follows:

1. 2013-2017 5-year American Community Survey (ACS) estimates of 2-bedroom adjusted standard quality gross rents calculated for each FMR area are used as the new basis for FY2020 provided the estimate is statistically reliable. For FY2020, the test for reliability is whether the margin of error for the estimate is less than 50% of the estimate itself and whether the ACS estimate is based on at least 100 survey cases. HUD does not receive the exact number of survey cases, but rather a categorical variable known as the count indicator indicating a range of cases. An estimate based on at least 100 cases corresponds to a count indicator of 4 or higher.

If an area does not have a reliable 2013-2017 5-year, HUD checks whether the area has had at least minimally reliable estimate in any of the past 3 years, or estimates that meet the 50% margin of error test described above. If so, the FY2020 base rent is the average of the inflated ACS estimates.

If an area has not had a minimally reliable estimate in the past 3 years, the estimate State for the area's corresponding metropolitan area (if applicable) or State non-metropolitan area is used as the basis for FY2020.

- 2. HUD calculates a recent mover adjustment factor by comparing a 2017 1-year 40th percentile recent mover 2-bedrooom rent to the 2013-2017 5-year 40th percentile adjusted standard quality gross rent. If either the recent mover and non-recent mover rent estimates are not reliable, HUD uses the recent mover adjustment for a larger geography. For metropolitan areas, the order of geographies examined is: FMR Area, Entire Metropolitan Area (for Metropolitan Sub-Areas), State Metropolitan Portion, Entire State, and Entire US; for non-metropolitan areas, the order of geographies examined is: FMR Area, and Entire US; for non-metropolitan Portion, Entire State, and Entire US; for non-metropolitan Portion, Entire State, and Entire US. The recent mover adjustment factor is floored at one.
- 3. HUD calculates the appropriate recent mover adjustment factor between the 5-year data and the 1-year data and applies this to the 5-year base rent estimate.
- 4. Rents are calculated as of 2018 using the relevant (regional or local) change in gross rent Consumer Price Index (CPI) from annual 2017 to annual 2018.
- 5. All estimates are then inflated from 2018 to FY2020 using a trend factor based on the forecast of gross rent changes through FY2020.
- 6. FY2020 FMRs are then compared to a State minimum rent, and any area whose preliminary FMR falls below this value is raised to the level of the State minimum.
- 7. FY2020 FMRs may not be less than 90% of FY2019 FMRs.

The results of the Fair Market Rent Step-by-Step Process

1. The following are the 2017 American Community Survey 5-year 2-Bedroom Adjusted Standard Quality Gross Rent estimate and margin of error for Kingsport-Bristol-Bristol, TN-VA MSA.

Area		ACS ₂₀₁₇ 5-Year 2-Bedroom Adjusted Standard Quality	ACS ₂₀₁₇ 5-Year 2-Bedroom Adjusted Standard Quality	Ratio	Sample Size Category	Result
------	--	---	---	-------	----------------------------	--------

	Gross Rent	Gross Rent Margin of Error			
Kingsport- Bristol- Bristol, TN-VA MSA	<u>\$606</u>	\$12	\$12 / \$606=0.02	6	0.02 < .5 $6 \ge 4$ Use ACS ₂₀₁₇ 5-Year Kingsport- Bristol- Bristol, TN- VA MSA 2-Bedroom Adjusted Standard Quality Gross Rent

Since the ACS_{2017} Margin of Error Ratio is less than .5, the ACS_{2017} Kingsport-Bristol-Bristol, TN-VA MSA value is used for the estimate of 2-Bedroom Adjusted Standard Quality Gross Rent:

Area	FY2020 Base Rent	
Kingsport-Bristol-Bristol, TN-VA MSA	\$606	

 A recent mover adjustment factor is applied based on the smallest area of geography which contains Kingsport-Bristol-Bristol, TN-VA MSA and has an ACS₂₀₁₇ 1-year Adjusted Standard Quality Recent-Mover estimate with a Margin of Error Ratio that is less than .5.

Area	ACS ₂₀₁₇ 1-Year Adjusted Standard Quality Recent- Mover Gross Rent	ACS ₂₀₁₇ 1-Year Adjusted Standard Quality Recent- Mover Gross Rent Margin of Error	Ratio	Sample Size Category	Result
Kingsport- Bristol- Bristol, TN- VA MSA – 2 Bedroom	<u>\$630</u>	\$39	0.062	2	2 < 4 Do Not Use ACS ₂₀₁₇ 1-Year Kingsport-Bristol- Bristol, TN-VA MSA 2-Bedroom Adjusted

Area	ACS ₂₀₁₇ 1-Year Adjusted Standard Quality Recent- Mover Gross Rent	ACS ₂₀₁₇ 1-Year Adjusted Standard Quality Recent- Mover Gross Rent Margin of Error	Ratio	Sample Size Category	Result
					Standard Quality Recent-Mover Gross Rent
Kingsport- Bristol- Bristol, TN- VA MSA – All Bedroom	<u>\$645</u>	\$33	0.051	4	0.051 < .5 $4 \ge 4$ Use ACS ₂₀₁₇ 1-Year Kingsport- Bristol-Bristol, TN-VA MSA All Bedroom Adjusted Standard Quality Recent-Mover Gross Rent

The smallest area of geography which contains Kingsport-Bristol-Bristol, TN-VA MSA and has an ACS₂₀₁₇ 1-year Adjusted Standard Quality Recent-Mover estimate with a Margin of Error Ratio that is less than .5 and with a sufficient number of sample cases is Kingsport-Bristol-Bristol, TN-VA MSA.

3. The calculation of the relevant Recent-Mover Adjustment Factor for Kingsport-Bristol-Bristol, TN-VA MSA is as follows:

ACS ₂₀₁₇ 5-Year Area	ACS ₂₀₁₇ 5-Year 40th Percentile Adjusted Standard Quality Gross Rent	ACS ₂₀₁₇ 1-Year 40th Percentile Adjusted Standard Quality Recent- Mover Gross Rent
Kingsport-Bristol- Bristol, TN-VA MSA – All Bedroom	<u>\$609</u>	<u>\$645</u>

Area	Ratio	Recent-Mover Adjustment Factor
Kingsport-Bristol-Bristol, TN-VA MSA	\$645 / \$609 =1.059	1.0591 ≥ 1.0 Use calculated Recent-Mover Adjustment Factor of 1.0591

4. The calculation of the relevant CPI Update Factors for Kingsport-Bristol-Bristol, TN-VA MSA is as follows: HUD updates the 2017 intermediate rent with the ratio of the annual 2018 local or regional CPI to the annual 2017 local or regional CPI to establish rents as of 2018.

	Update Factor	Туре
CPI Update Factor	<u>1.0299</u>	Region CPI

5. The calculation of the Trend Factor is as follows: HUD forecasts the change in national gross rents from 2018 to 2020 for each CPI area and Census Region. This makes Fair Market Rents "as of" FY2020.

Trend Factor	Trend Factor Type
<u>1.0513</u>	Region

6. The FY 2020 2-Bedroom Fair Market Rent for Kingsport-Bristol-Bristol, TN-VA MSA is calculated as follows:

Area	ACS ₂₀₁₇ 5-Year Estimate	<u>Recent-</u> <u>Mover</u> <u>Adjustment</u> <u>Factor</u>	<u>Annual 2017</u> <u>to 2018 CPI</u> <u>Adjustment</u>	<u>Trending</u> <u>1.0513 to</u> <u>FY2020</u>	FY 2020 2-Bedroom FMR
Kingsport- Bristol- Bristol, TN- VA MSA	\$606	1.0591	1.0299	1.0513	\$606 * 1.059 * 1.0299 * 1.0513=\$695

7. In keeping with HUD policy, the preliminary FY 2020 FMR is checked to ensure that is does not fall below the state minimum.

Since Kingsport-Bristol-Bristol, TN-VA MSA is a multistate area, the highest state minimum of the states comprising Kingsport-Bristol-Bristol, TN-VA MSA is used:

State	FY 2020 State Minimum
Tennessee	\$649
Virginia	\$714

The relevant state minimum is that of Virginia at \$714.

Area	Preliminary FY2020 2-Bedroom FMR	FY 2020 Virginia State Minimum	Final FY2020 2-Bedroom FMR
Kingsport-Bristol- Bristol, TN-VA MSA	\$695	<u>\$714</u>	\$695 ≤ \$714 Use Virginia minimum of \$714

8. Bedroom ratios are applied to calculate FMRs for unit sizes other than two bedrooms.

Click on the links in the table to see how the bedroom ratios are calculated.

FY 2020 FMRs By Unit Bedrooms									
	<u>Efficiency</u>	<u>One-</u> Bedroom	Two- Bedroom	<u>Three-</u> <u>Bedroom</u>	<u>Four-</u> <u>Bedroom</u>				
FY 2020 FMR	\$533	\$542	\$714	\$933	\$1,029				

9. The FY2020 FMR must not be below 90% of the FY2019 FMR.

	Efficiency	One- Bedroom	Two- Bedroom	Three- Bedroom	Four- Bedroom
FY2019 FMR	\$515	\$529	\$700	\$924	\$1,015
FY2019 floor	\$464	\$476	\$630	\$832	\$914

Before using the numbers from the Rent & Income Limit Calculator©, we strongly recommend that you check with the applicable state housing agency to verify that the state agrees with the numbers. The numbers round down to the nearest \$1.

This Rent & Income Limit Calculator© does not calculate low-income housing tax credit (LIHTC) limits greater than 50% LIHTC or 60% LIHTC limits, depending on the minimum set-aside elected with the IRS on Form 8609 in accordance with Internal Revenue Code Section 42(i)(3)(A). In other words, if the 20/50 minimum set-aside was elected then 50% LIHTC is the maximum rent calculated and allowed to qualify as a tax credit unit; or if the 40/60 minimum set-aside was elected then 60% LIHTC is the maximum allowed to qualify as a tax credit unit.

<u>Revenue Ruling 89-24</u> require that the LIHTC rent & income levels start their calculations with the HUD published very low-income (VLI) amounts because the HUD published VLI amounts include certain HUD adjustments, such as high housing cost for high FMR areas to increase income, and state non-metropolitan median income to provide a floor for income limits. The result is that many counties have VLI amounts that are different than 50% of the AMI published by HUD (the 4-person AMGI we have shown above). The Novogradac Rent & Income Calculator© starts by default with the HUD published VLI amounts in accordance with <u>Revenue Ruling 89-24</u>.

⁽¹⁾ The rent and income limits for each year are effective beginning with the effective date shown above. There is a grace period for 45 days to implement the new rent and income limits, which means that the old limits can be relied upon for 45 days after the effective date of the new limits. For example income limits effective 12/04/2012, can be relied on until 1/17/2013. For more information, see <u>Revenue Ruling 94-57</u>.

IRS LIHC Newsletter #48 and IRS LIHC Newsletter #50 clarify that for projects placed in service during the 45-day grace period, the owner may choose the new or the old income limits. For example, if a project was placed in service on 1/8/2013 and the 2012 income limits are higher than the 2013 income limits, an owner may use the higher income limits from 2012 to income qualify tenants and set rents accordingly because the project was placed in service with the 45-day grace period.

Please note, the Rent & Income Limit Calculator does not apply a 45-day grace period automatically. The user needs to indicate that the placed in service date and/or gross rent floor date occurred 45 days earlier (in the prior HUD Fiscal Year) if they want to apply the 45-day rule under <u>Revenue Ruling 94-57</u> that allows owners to rely on the prior year. Therefore, projects that were placed in service during the 45-day grace period, and want to use the prior year, should select that they were placed in service as of the prior year. For example, if a project placed in service on 1/8/2013, and the project wanted to use the 45-day grace period, the user should select that their project was in service prior to 12/4/2012. Similarly, projects that have a gross rent floor effective as of the carryover allocation date (or reservation letter date for bond projects) during the 45-day grace period, and want to use the prior year, should select that the gross rent floor was effective as of the prior year. For example, if a project received a carryover allocation letter on 1/8/2013, and the owner did not elect placed in service date as the gross rent floor, and the project wanted to use the 45-day grace period, the user should select that the project wanted to use the 45-day grace period, and want to use the prior year, should select that the gross rent floor was effective as of the prior year. For example, if a project received a carryover allocation letter on 1/8/2013, and the owner did not elect placed in service date as the gross rent floor, and the project wanted to use the 45-day grace period, the user should select that the gross rent floor did not elect placed in service date as the gross rent floor, and the project wanted to use the 45-day grace period, the user should select that their gross rent floor was effective prior to 12/4/2012.

⁽²⁾ For HUD FY 2013 HUD originally issued income limits on December 4, 2012 then issued revised income limits on December 11, 2012. In <u>IRS LIHC Newsletter #50</u>, the IRS has stated that the effective date for the revised FY 2013 income limits is December 4, 2012. Based on this guidance, the Rent & Income Limit Calculator© uses December 4, 2013 for the effective date for the revised FY 2013 limits. Please see <u>IRS LIHC Newsletter #50</u> for more detail.

⁽³⁾ An area may lose its rural area status. There is no clear guidance that a project is held harmless at the national nonmetropolitan income limits when an area loses its rural status. The Rent & Income Limit Calculator© assumes that a project that is not indicated as rural in the current year was also not rural in the prior year, and therefore, does not receive hold harmless treatment based on the prior year national non-metro amount.

Please consult your state agency and tax advisor for further clarification.

⁽⁴⁾ USDA may change their determination of what projects qualify as rural during the course of a year. Please periodically check with USDA to determine the continued rural eligibility of your project.

The national non-metropolitan median income has been adjusted for household size based on the family size adjustments outlined in the HUD Briefing Materials and as shown in each year's <u>HUD FAQ</u>. The IRS did not specify whether or not to round to the nearest \$50, however, the Rent & Income Limit Calculator© will round to the nearest \$50 in accordance with the methodology referenced in HUD Briefing Materials.

⁽⁵⁾ A project uses HERA Special if income was determined prior to 1/1/2009 and the project is in a HERA Special county. A project's income limits are held harmless at the prior year income limits if income was determined in the prior year or earlier and the income limits have decreased. Please note that the IRS has informally indicated that the definition of "determined" for purposes of the HERA Special and MTSP Hold Harmless income limits means that a project was placed in service. Please see IRS LIHC Newsletter #35 for more information about "determined" and

projects with buildings that were placed in service before and after HUD income limit effective dates. Therefore, projects placed in service prior to 1/1/2009 are generally eligible for HERA Special. Please see footnote 7 for information about acquisition/rehabilitation projects.

⁽⁶⁾ Internal Revenue Code Section 142(d)(2)(i) indicates that hold harmless applies on a calendar year. The Rent & Income Limit Calculator© assumes that "calendar year" in the hold harmless rule means the HUD Fiscal Year. For example, the 2009 calendar year means the HUD Fiscal Year from 3/19/2009 through 5/13/2010. In other words, the Rent & Income Limit Calculator© assumes that "calendar year" in the hold harmless rule means the highest income level achieved during any HUD Fiscal Year.

The Rent & Income Limit Calculator© assumes that a rural project will receive hold harmless treatment at the national non-metro amount based on the prior year national non-metro amount if the national non-metro median income were to fall from year to year. If a rural project qualifies for HERA Special and the HERA Special is higher than the national non-metro, then the HERA Special amount will be used. Please note that the IRS has not issued guidance that specifically allows hold harmless treatment at the national non-metro amount for rural projects, however, Internal Revenue Code 42(g)(4) by reference to Internal Revenue Code 142(d)(2)(E) implies that hold harmless treatment would apply at the national non-metro amount for rural projects. Please consult your tax advisor for further clarification.

⁽⁷⁾ Please note that for acquisition/rehabilitation projects, the IRS guidance indicates that income and rent limits are determined at the later of the acquisition date or when management begins income-qualifying households in the project. For example, if a project was acquired in 2011, the rehabilitation was placed-in-service in 2012, and management began income-qualifying households in 2011 then the project would be considered placed in service in 2011, for income and rent purposes. If a project was acquired in 2011, the rehabilitation was placed-in-service in 2012, and management began income-qualifying households when the rehabilitation placed-in-service in 2012, then the project would be considered placed in service in 2012, and management began income-qualifying households when the rehabilitation placed-in-service in 2012, then the project would be considered placed in service in 2012 for income and rent purposes. Please see <u>IRS LIHC Newsletter #35</u> for more detail. Please consult your tax advisor for further clarification.

⁽⁸⁾ <u>Revenue Procedure 94-57</u> gives guidance on the gross rent floor election.

Tax credit projects without bond financing:

"The Internal Revenue Service will treat the gross rent floor in section 42(g)(2)(A) as taking effect on the date an Agency initially allocates a housing credit dollar amount to the building [generally referred to as the 42M letter] under section 42(h)(1). However, the Service will treat the gross rent floor as taking effect on a building's placed in service date if the building owner designates that date as the date on which the gross rent floor will take effect for the building. An owner must make this designation to use the placed in service date and inform the Agency that made the allocation to the building is placed in service."

Tax credit projects with bond financing:

"The Service will treat the gross rent floor as taking effect on a building's placed in service date if the building owner designates that date as the date on which the gross rent floor will take effect for the building. An owner must make this designation to use the placed in service date and inform the Agency that issued the determination letter to the building no later than the date on which the building is placed in service."

⁽⁹⁾ The Rent & Income Limit Calculator© assumes all buildings in a project have a rent floor effective date under <u>Revenue Procedure 94-57</u> in the same HUD Fiscal Year. However, if your buildings have rent floor effective dates under <u>Revenue Procedure 94-57</u> in different HUD Fiscal Years, then you should run the calculator separately for each group of buildings in a particular HUD Fiscal Year.

The Rent & Income Limit Calculator© assumes that different AMGI limits (40%, 35%, 30%, etc.) chosen by the user will also have a rent floor election under <u>Revenue Procedure 94-57</u> from the same HUD Fiscal Year that applies to the federal level of 50% or 60%.

⁽¹⁰⁾ The Consolidated Appropriations Act of 2014 changed how the 30% income limits is calculated. The 30% limit, which is now called the extremely low income limit, is determined by taking the greater of the 30% income limit as calculated by HUD or the poverty level as determined by the Department of Health and Human Services, which is then capped at the 50% Very Low Income Limit ('VLI') published by HUD. HUD has only published the data up to 8 people. For household sizes above 8 people please visit the following website: https://www.huduser.gov/portal/datasets/mtsp.html
